Ad 3: Lead Form Ad: "Planning to Build in Bengaluru? Know Your Budget Fit First" . . . 91

Ad 4: Reel: "From First Meeting to the Reveal" (Process + Testimonial) . . . 95

Before you publish: items to confirm with AKAR

Everything in this document is written from the verified website information in the brand overview you shared. No projects, awards, clients, statistics or prices have been invented. These points need AKAR's confirmation first:

- Services not listed on the website (renovation and remodelling, turnkey, project management, luxury villa design as a named service). Blogs 8 and 11 are educational, with consultation-style CTAs. Confirm AKAR offers these before promoting them heavily.
- Lead offers ("initial project discussion", "plot feasibility discussion"): confirm they are offered, whether free, and the response time promised in the Lead Form thank-you screen.
- Service locations: copy is Bengaluru-first. Chennai, Hyderabad and Kochi appear only in client testimonials. Confirm whether AKAR takes projects there before targeting those cities.
- Internal link URLs (for example /services/architecture, /process, /portfolio, /testimonials, /contact) are suggestions. Replace them with the real page paths.
- Phone and WhatsApp numbers, the landing page URL and any testimonial text must be supplied and approved by AKAR. Items in [brackets] are placeholders.
- Brand name: the copy uses "AKAR Architects" throughout. Choose one primary name for the website and Instagram. Fix the "modren" spelling in the portfolio heading on the homepage before sending ad traffic to it.
- Regulatory points (khata, setbacks, rainwater harvesting, approvals) are written generically. Have AKAR review them against current Bengaluru rules before publication.

1. Monthly Blog Calendar

12 blogs across 4 weeks, published Monday, Wednesday and Friday (3 per week). Commercial and local intent topics come first in each week.

Week 1: 5 to 9 October

#	Date and title	Keywords	Intent, funnel, lead	Suggested CTA
1	**Mon, 5 Oct 2026** How to Choose an Architect in Bengaluru: 9 Things to Check Before You Hire	**Primary:** how to choose an architect in Bengaluru **Secondary:** architects in Bengaluru, best architects in Bengaluru, questions to ask an architect, hire an architect for house design **Long-tail:** how to choose an architect for house design in Bengaluru / what to ask an architect before hiring / how to verify architect registration in India / architect for villa design Bengaluru	**Intent:** Commercial + Local **Funnel:** BOFU **Competition:** Medium-High (local pack and directories compete) **Lead potential:** Very High	Share your plot and requirements for an initial project discussion

How each blog is used

Each blog is published on the AKAR website blog first, then adapted for external platforms (2 to 3 days later, to avoid duplicate-content issues) and shared on LinkedIn (same day as the website post). All three versions are included below. Blogs with the strongest commercial intent (1, 2, 4, 7) should be internally linked from the homepage or services pages once published.

2. Complete SEO Details for Every Blog

SEO title, meta title, meta description, URL slug, H1, heading structure, keywords, FAQs and links, ready to paste into the CMS.

FAQs (also add FAQ schema markup)

How do I choose the best architect in Bengaluru?

Verify COA registration, review projects similar to yours, ask for a written process and fee scope, test communication, and speak to past clients before deciding.

When should I hire an architect?

Ideally before you buy the plot or at least before finalising the design and appointing a contractor. Early input prevents expensive layout and approval issues.

How can I verify an architect's registration?

Ask for the COA registration number and check it with the Council of Architecture. Registered architects can legally use the title "architect".

Should I choose an architect or a design-build contractor?

They serve different roles. An architect designs and represents your interests; a contractor builds. Many homeowners benefit from having both, working together.

What should I bring to the first meeting with an architect?

Bring plot documents or a site plan, a rough budget range, a list of must-haves, reference images and any approvals or restrictions you already know of.

Do architects in Bengaluru also handle interior design?

Many do. Ask whether interiors are handled by the same team, as this keeps architecture and interiors consistent. AKAR works across architecture and interior design.

FAQs (also add FAQ schema markup)

How much do architects charge in India?

It varies by project size, complexity, scope and the architect's practice. Fees are commonly a percentage of construction cost, a per-square-foot rate or a fixed fee. Always request a written proposal.

Is the architect fee a percentage of construction cost?

Often, but not always. Some architects use a per-square-foot rate or a lump sum. The method matters less than a clearly documented scope.

Does the architect fee include interior design?
Not necessarily. Architecture, interiors and landscape are sometimes quoted separately. Ask for each to be listed clearly.

Are site visits included in the fee?
It depends on the proposal. Confirm the number of visits and whether supervision during construction is part of the scope.

When do I pay an architect?
Typically in stages linked to milestones such as appointment, concept approval, working drawings and construction phases.

Can I hire an architect only for drawings?
Yes, but design intent is easily diluted without site involvement. Even occasional review visits improve the result.

FAQs (also add FAQ schema markup)

What is the biggest mistake when building a house?
Starting construction before the design and drawings are complete. It leads to on-site decisions, variations and cost overruns.

When should I hire an architect for my home?
Ideally before buying the plot, and certainly before finalising the plan or appointing a contractor.

How much contingency should I keep in my construction budget?
A common rule of thumb is ten to fifteen percent, adjusted to the complexity of the project and the certainty of your scope.

Can I change the plan during construction?
You can, but changes after structure or services are in place are the costliest. Settle layouts before work begins.

What should I check before buying a plot?
Legal documents, approvals, access, orientation, soil and shape. An architect can review the plot before you commit.

Do I need an architect if I have a contractor?
A contractor builds; an architect designs and protects your interests. Together they often deliver better results than either alone.

FAQs (also add FAQ schema markup)

What do residential architects do?

They design homes: layouts, structure coordination, materials, details, approvals support and construction-stage guidance, often with interiors and landscape.

How long does it take to design a house?
It depends on size, complexity and how quickly decisions are made. Design stages usually run for weeks to a few months before construction begins.

What documents do I need to begin?
Plot ownership and approval documents, a site plan or survey, your rough budget and a list of requirements.

Will the architect also design interiors and landscape?
Often, yes, if included in scope. Ask for it to be listed separately so you can see what is covered.

Can I make changes after the design is approved?
Small changes are possible. Major changes after working drawings or construction begins can affect cost and time.

Does the architect visit the site during construction?
A good architect does. Confirm the frequency and what is included in the scope.

Do residential architects in Bengaluru work outside the city?
Some do. AKAR's published client testimonials come from Chennai, Bengaluru, Hyderabad and Kochi, so please enquire about your location.

External link (authoritative source)	URL
Council of Architecture	https://www.coa.gov.in

FAQs (also add FAQ schema markup)

Should I hire an architect or a contractor first?

For a new build or a major renovation, start with an architect. Appoint the contractor after the drawings are ready to be priced.

What is the difference between an architect and an interior designer?
An architect designs the building as a whole, including layout, structure coordination and approvals. An interior designer focuses on the interior spaces, furniture, finishes and lighting.

Do I need an architect to build a house in Bengaluru?
Plans generally need to be prepared by qualified professionals for approval, and design input improves the result. Confirm current local requirements for your plot.

Is an architect the same as a civil engineer?
No. Architects design spaces and buildings; civil and structural engineers design the structure and its safety. They work together.

Can an architect also manage construction?
Some provide construction-stage supervision or project management. Confirm what is included in the scope.

Is it cheaper to go directly to a contractor?
The upfront cost may look lower, but incomplete design often leads to rework and variations later.

FAQs (also add FAQ schema markup)

What documents should I check before buying a plot in Bengaluru?
Title deeds, sale deed, encumbrance certificate, khata documents, tax receipts and layout approval. Have a lawyer review them.

What is the difference between A-khata and B-khata?
They are categories of property records that affect approvals, utility connections and loans. Verify the current implications with a lawyer or the authority.

Which direction should a plot face?
There is no single best direction. Orientation affects light, heat and ventilation, and some families also consider Vastu. An architect can advise based on the site.

Should I get a soil test before buying?
A soil investigation is advisable before finalising foundation design, and it helps to know the likely conditions before you buy.

Can an architect review a plot before I buy it?
Yes. An early review of size, shape, orientation and constraints helps you decide with more confidence.

How do I find out how much I can build on my plot?
It depends on zoning, road width, setbacks and other local rules. An architect can check this against current regulations.

FAQs (also add FAQ schema markup)

How much does it cost to build a house in Bengaluru?

It depends on area, specification, site conditions and market rates at the time. Get itemised quotes based on complete drawings for a reliable figure.

What costs are not included in construction cost?

Design fees, approvals, utility connections, compound wall, landscape, interiors and furniture, fixtures and contingency are often missed.

How much contingency should I plan?
A common rule of thumb is ten to fifteen percent, adjusted for project complexity and uncertainty.

How can I reduce construction cost without compromising quality?
Choose an efficient plan, keep the form simple, finalise decisions early and protect spending on structure, waterproofing and services.

Does a bigger plot always mean a bigger cost?
Not necessarily. Cost depends on built-up area and specification, not plot size alone. Site conditions also play a role.

Should I fix the budget before or after hiring an architect?
Set a rough ceiling first, then refine it with your architect. They can show whether your brief fits it.

FAQs (also add FAQ schema markup)

What makes a villa design luxurious?
Proportion, natural light, privacy, quality materials used with restraint, careful detailing and layouts that make daily life effortless.

How do I choose a villa architect in Bengaluru?
Look for experience with similar homes, a clear process, transparent fees and an approach that includes interiors and landscape.

How long does it take to design a villa?
It depends on size and complexity, and on how quickly decisions are made. Design and detailing usually take months before construction begins.

Should the same team design the villa and its interiors?
Doing so helps keep the architecture, interiors and landscape consistent, and avoids late clashes with services and joinery.

Is a larger villa always more luxurious?
No. Good proportions, light and planning matter more than size.

How can I make a villa sustainable?
Use orientation, shading, cross-ventilation, daylight, efficient systems and durable materials chosen at design stage.

FAQs (also add FAQ schema markup)

Can a modern house be Vastu compliant?

In many cases, yes. It depends on plot orientation, size and how strictly you want to follow it. Early planning helps.

Should I consult a Vastu expert before or after the architect?

Share Vastu preferences with your architect at the start. If you use a Vastu consultant, involve them early in the layout stage.

Which plot direction is best for Vastu?

Opinions vary across schools. Rather than a single best direction, check how well your preferred placements can be achieved on the specific plot.

Does following Vastu increase construction cost?
Not necessarily. Cost depends on area and specification. Layout compromises or late changes are what usually add cost.

Can Vastu be adapted for small plots or apartments?
Often with compromises. Prioritise the principles that matter most to you and test layout options.

Do architects in Bengaluru design Vastu-friendly homes?
Many do, if you share your requirements at the beginning of the project.

FAQs (also add FAQ schema markup)

How do I plan an office layout?
Begin with headcount, work style and growth plans. Then zone the space for focus, collaboration, meetings and support, and test it on the floor plan.

What is a test-fit?
A quick layout study showing whether your requirements fit a given floor plate. It is useful before you sign a lease.

What affects the cost of office interiors?
Area, specification, HVAC, electrical and network needs, joinery, furniture, lighting and the complexity of the design.

How long does an office fit-out take?
It depends on size and complexity. Design, approvals, procurement and execution each take time, so plan with a buffer.

How do I improve acoustics in an open office?
Zone noisy and quiet areas, use soft finishes and ceiling treatments, and provide meeting rooms and focus spaces.

Do I need landlord or building approvals?
Most commercial buildings have fit-out guidelines. Check your lease and building management early.

FAQs (also add FAQ schema markup)

What is the correct order for renovating a house?

Typically approvals, demolition, structural work, civil work, plumbing and electrical, waterproofing, ceilings, plastering, flooring, joinery, painting and finishing.

How much contingency should I keep for a renovation?
Many planners keep fifteen to twenty percent because hidden conditions are common. Adjust to the age and condition of the property.

How long does a home renovation take?
It depends on scope. Cosmetic updates take weeks; layout changes and full-home renovations can take months.

Can I live in my house during renovation?
Often yes for partial work if phased carefully, but expect dust, noise and disruption.

Do I need an architect for a renovation?
For layout, structural or major changes, design input helps avoid costly mistakes. For cosmetic work, a designer or contractor may suffice.

Do I need permission to renovate an apartment?
Usually you need your society's approval, and structural changes require professional advice and possibly authority approvals.

FAQs (also add FAQ schema markup)

When should I plan landscape design for a new home?

At the same time as the architecture. It affects levels, drainage, services and budget.

How can I design a low-maintenance garden?
Use climate-suited plants, drip irrigation, durable hardscape and simple layouts. Match the design to the time you can spend.

What plants suit gardens in Bengaluru?
Many species do well in the moderate climate, but suitability depends on light, soil and space. Consult a local nursery or landscape professional.

How much should I budget for landscaping?
It varies widely by size and ambition. Include landscape in the overall project budget from the beginning, so it is not left with leftovers.

Can I have a garden on a terrace?
Yes, with proper waterproofing, drainage, load planning and soil depth. Coordinate with your architect and engineer.

Should the architect and landscape designer work together?
Yes. Coordinated levels, drainage and materials produce a more cohesive result.

Blog 1: How to Choose an Architect in Bengaluru: 9 Things to Check Before You Hire

Publish date: Mon, 5 Oct 2026 | Primary keyword: how to choose an architect in Bengaluru

How to Choose an Architect in Bengaluru: 9 Things to Check Before You Hire

You have a plot, or a home that no longer works for your family, and a list of names from friends, Instagram and Google. Every portfolio looks beautiful. So how do you decide who will actually deliver the home you have in mind?

Choosing an architect in Bengaluru is less about finding the prettiest photographs and more about finding the right working partner. You will be in touch with this person for months, sometimes years, and their decisions will shape your budget, your timeline and the way your family lives every day. These nine checks help you compare architects on what really matters.

1. Confirm they are registered

In India the title "architect" is protected under the Architects Act, 1972, and practising architects must be registered with the Council of Architecture (COA). Ask for the registration number and check it on the COA website. It takes two minutes and removes a real risk.

2. Look for relevant experience, not just good photographs

A studio that designs beautiful offices may not be the right fit for a compact urban home, and vice versa. Ask which of their projects is closest to yours in size, budget and site conditions. Range is a strength, but relevance matters more.

3. Read the portfolio like a client, not a visitor

Look past the hero shot. Does the portfolio show floor plans as well as finished spaces? Can you see how the design handles light, ventilation and privacy? Is every project a copy of one look, or does each reflect its client? Ask what the client's brief was and what the architect changed or improved along the way.

4. Ask for the process in plain language

A confident architect can explain the journey from first meeting to handover without jargon: discovery, concept, detailed design, execution support, completion. If the answer is vague at this stage, expect vague decisions later.

5. Understand the fee and what it includes

Architects structure fees differently, for example as a percentage of project cost, a per-square-foot rate or a fixed fee. What matters is what is covered: concept design, working drawings, coordination with structural and services consultants, site visits, approvals support. Our guide to [architect fees in India] explains how to compare proposals fairly.

6. Test communication in the first conversation

Do they ask how your family lives, or only how many bedrooms you want? Do they respond when they say they will? Is there one point of contact? Good communication in the first fortnight is a reliable preview of the next eighteen months.

7. Ask who is on site, and how often

Drawings are only half the job. Ask who visits the site, how often, and how differences between drawing and execution are resolved. This is where many homes quietly lose quality.

8. Speak to past clients

Published testimonials are a good start. Ask whether you can speak to one or two clients. Questions worth asking: Did the project stay close to the agreed budget and timeline? How were changes handled? Would they hire the studio again?

9. Trust your chemistry, then verify it

You should feel comfortable explaining your family's habits, worries and budget to this person. But let comfort be the tiebreaker, not the only criterion.

> Expert insight: In a good first meeting, the architect asks you more questions than you ask them. The quality of the brief decides the quality of the home.

Questions to ask in your first meeting

- Which of your projects is closest to what I am planning, and what did you learn from it?
- Who will be my day-to-day contact, and who will visit the site?
- What exactly is included in your fee, and what would be charged separately?
- How do you handle budget changes midway through design?
- How long does each design stage usually take, and what do you need from me?
- How do you coordinate with structural engineers, contractors and other consultants?
- Can I speak to a previous client?

Common mistakes to avoid

- Choosing on the lowest fee alone, then paying for it in rework on site.
- Hiring an architect after the contractor has already started.
- Bringing a single Pinterest image and expecting it to fit your plot, orientation and budget.
- Skipping the written scope of work.

How we approach this at AKAR Architects

Our process begins with collaborative discovery. We take time to understand how you live, what your plot allows and what you want to spend before we draw anything. From there we move into creative design and curation, support the execution stage, and finish with the handover we call the reveal. We work across architecture, interior design, landscape design and urban design from our studio near KR Circle, Bengaluru, so a home can be considered as a whole rather than in disconnected parts.

Conclusion

The best architect for you is the one who understands your brief, explains the process clearly, is transparent about fees and stays involved until the home is complete. Use the nine checks above, ask the questions, and compare at least two or three studios before you decide.

> **CTA** Shortlisting architects for a home in Bengaluru? Share your plot details and requirements with AKAR Architects and we will set up an initial project discussion, so you can judge our approach before you commit to anything.

Frequently asked questions

How do I choose the best architect in Bengaluru?

Verify COA registration, review projects similar to yours, ask for a written process and fee scope, test communication, and speak to past clients before deciding.

When should I hire an architect?

Ideally before you buy the plot or at least before finalising the design and appointing a contractor. Early input prevents expensive layout and approval issues.

How can I verify an architect's registration?

Ask for the COA registration number and check it with the Council of Architecture. Registered architects can legally use the title "architect".

Should I choose an architect or a design-build contractor?

They serve different roles. An architect designs and represents your interests; a contractor builds. Many homeowners benefit from having both, working together.

What should I bring to the first meeting with an architect?

Bring plot documents or a site plan, a rough budget range, a list of must-haves, reference images and any approvals or restrictions you already know of.

Do architects in Bengaluru also handle interior design?

Many do. Ask whether interiors are handled by the same team, as this keeps architecture and interiors consistent. AKAR works across architecture and interior design.

Blog 2: Architect Fees in India: How Architects Charge and What Your Fee Should Include

Publish date: Wed, 7 Oct 2026 | Primary keyword: architect fees in India

Architect Fees in India: How Architects Charge and What Your Fee Should Include

"How much does an architect charge?" is one of the most searched questions by people planning a home, and one of the hardest to answer in a single line. The honest answer is that fees depend on the scope, the size and complexity of the project, and the services you ask the architect to provide. This guide explains how architects charge in India, what a fee should cover, and how to compare two proposals that look very different on paper.

The three common ways architects charge

Percentage of project cost. The fee is a percentage of the construction cost. It scales with the project and is common for larger or more complex work. Because the construction cost is not known on day one, the percentage is usually applied to an agreed estimate and then reconciled.

Rate per square foot. The fee is calculated on the built-up area. It is easy to understand and easy to compare, but it should state clearly whether it covers architecture alone or includes interiors and landscape.

Fixed or lump-sum fee. A single agreed amount for a defined scope, often paid in stages. It gives you certainty, as long as the scope is written down properly.

None of these is automatically better. What matters is that the method is clear and the scope is documented.

What a fee should clearly state

Two proposals can look similar and be very different. Check whether each of these is included, excluded, or charged separately:

- Concept design and design development
- Working drawings and detailed drawings
- Coordination with structural and services consultants
- Support with local approvals and sanction drawings
- Site visits during construction, and how many
- Interior design and landscape design, if you want them
- 3D visualisations and presentations
- Revisions: how many rounds are included

How fees are usually paid

Most architects link payments to stages, for example on appointment, after concept approval, after working drawings, and in phases during construction. Staged payment protects both sides. Be wary of any arrangement where a large share is due before any design is shown.

> Expert insight: The cheapest proposal is rarely the cheapest outcome. A thin scope often means missing details, and missing details are fixed on site, at your cost.

Why a low fee can become expensive

- Incomplete drawings lead to decisions made on site by the contractor.
- Little or no site supervision means errors are found after they are built.
- Poor coordination between architecture, structure and services leads to rework.

- Unclear revision limits lead to disputes.

Practical tips for comparing proposals

1. Ask every architect to quote against the same written scope.
2. Convert each proposal into the stages it covers, not just the headline number.
3. Ask what is charged extra, and at what rate.
4. Ask how many site visits are included.
5. Check whether the fee changes if the project area or budget changes.
6. Ask for the stage-wise payment schedule in writing.

Fees are one input, not the decision

A fee tells you what you will pay for design. The value of an architect lies in the decisions that protect your budget and timeline: a layout that avoids wasted area, details that reduce maintenance, and a clear set of drawings that contractors can price accurately. When you compare, compare outcomes as well as numbers.

How AKAR Architects approaches fees

Every project is different, so we do not believe in quoting before we understand the brief. After an initial conversation about your site, requirements and expectations, we outline the scope and discuss how it would be structured. Our four-step process (collaborative discovery, creative design and curation, execution, and the reveal) gives you a clear picture of what each stage involves.

Conclusion

Ask how the architect charges, what is included, how payments are staged and what happens if the scope changes. Put it in writing. Then compare proposals on scope and clarity, not on price alone.

> **CTA** Want a clear scope and fee discussion for your home or commercial project? Contact AKAR Architects with your project details and we will walk you through how it would work.

Frequently asked questions

How much do architects charge in India?

It varies by project size, complexity, scope and the architect's practice. Fees are commonly a percentage of construction cost, a per-square-foot rate or a fixed fee. Always request a written proposal.

Is the architect fee a percentage of construction cost?

Often, but not always. Some architects use a per-square-foot rate or a lump sum. The method matters less than a clearly documented scope.

Does the architect fee include interior design?

Not necessarily. Architecture, interiors and landscape are sometimes quoted separately. Ask for each to be listed clearly.

Are site visits included in the fee?

It depends on the proposal. Confirm the number of visits and whether supervision during construction is part of the scope.

When do I pay an architect?

Typically in stages linked to milestones such as appointment, concept approval, working drawings and construction phases.

Can I hire an architect only for drawings?

Yes, but design intent is easily diluted without site involvement. Even occasional review visits improve the result.

Blog 3: 10 Expensive Mistakes to Avoid Before Building Your Dream Home

Publish date: Fri, 9 Oct 2026 | Primary keyword: mistakes to avoid when building a house

10 Expensive Mistakes to Avoid Before Building Your Dream Home

Most expensive problems in a new home are not construction problems. They are decisions made before construction began: a plot bought without checks, a plan approved in a hurry, a budget that never included the things everyone forgets. Here are ten mistakes we see homeowners make, and how to avoid each one.

1. Buying the plot first and thinking about design later

The shape, orientation, slope and legal status of a plot decide what you can build and what it will cost. Involve an architect before you pay the token amount, not after. Our [plot checklist] covers what to verify.

2. Starting without a written brief

"Three bedrooms and a nice living room" is not a brief. Write down how many people live in the house, who works from home, whether parents will move in, how you entertain and how your needs may change in ten years. A clear brief saves months of redesign.

3. Setting a budget that ignores everything except construction

Construction is only one line. Add design fees, approvals, compound wall and gate, landscape, electrical and plumbing fixtures, furniture, curtains, and moving costs. Keep a contingency reserve; many planners use a rule of thumb of ten to fifteen percent, adjusted to the project.

4. Hiring a contractor before the drawings are complete

Contractors cannot price what has not been drawn. Starting early with incomplete drawings leads to on-site decisions, variations and disputes. Finish the design and detailed drawings first.

5. Copying a plan or a picture

A home designed for another family on another plot, facing another direction, rarely works. A good plan responds to your site's orientation, wind, light and neighbours. Use references for mood and materials, not as a layout.

6. Ignoring light, ventilation and orientation

Bengaluru's moderate climate is a gift. A well-oriented home with cross-ventilation, shaded openings and good daylight can be comfortable with far less artificial cooling and lighting. These decisions cost little at design stage and are expensive to correct later.

7. Under-planning storage and services

Missing storage leads to clutter; poorly planned plumbing and electrical lead to cuts in finished walls. Plan bathroom and kitchen layouts, utility, water storage and electrical points on drawings, not on site.

8. Spending on finishes before fundamentals

Waterproofing, structure, drainage and insulation do not photograph well, but they decide how the house ages. Protect the budget for the invisible parts first.

9. Not planning for approvals and timelines

Sanction, utility connections and inspections take time. A realistic schedule includes them. Ask your architect which approvals your project needs and in what order.

10. Treating the architect as a drafter, not a partner

The strongest results come when the architect is involved from site selection through handover. Early input on layout, structure, services and materials is where the largest savings happen.

> Expert insight: The most valuable hour with an architect is before the first line is drawn. The questions asked in that hour decide the shape of the budget.

Practical tips: a pre-construction checklist

- Verify the plot's legal documents and approvals.
- Write a one-page family brief.
- Agree a total budget including soft costs and contingency.
- Complete design and working drawings before appointing a contractor.
- Decide the finishes and fixtures early, to avoid late changes.
- Agree who supervises the site and how often.

How AKAR Architects helps

Our process starts with collaborative discovery, a structured conversation about your family, plot and budget, before any design begins. It is designed to surface the questions above early, when changing course costs almost nothing.

Conclusion

A dream home is built on dozens of small decisions made in the right order. Avoid these ten mistakes and you protect your budget, your timeline and your peace of mind.

> **CTA** Before you start building, talk to AKAR Architects. Share your plot, your plans and your concerns, and we will help you spot what to fix while it is still easy and inexpensive.

Frequently asked questions

What is the biggest mistake when building a house?

Starting construction before the design and drawings are complete. It leads to on-site decisions, variations and cost overruns.

When should I hire an architect for my home?

Ideally before buying the plot, and certainly before finalising the plan or appointing a contractor.

How much contingency should I keep in my construction budget?

A common rule of thumb is ten to fifteen percent, adjusted to the complexity of the project and the certainty of your scope.

Can I change the plan during construction?

You can, but changes after structure or services are in place are the costliest. Settle layouts before work begins.

What should I check before buying a plot?

Legal documents, approvals, access, orientation, soil and shape. An architect can review the plot before you commit.

Do I need an architect if I have a contractor?

A contractor builds; an architect designs and protects your interests. Together they often deliver better results than either alone.

Blog 4: Residential Architects in Bengaluru: What a Complete Home Design Process Looks Like

Publish date: Mon, 12 Oct 2026 | Primary keyword: residential architects in Bengaluru

Residential Architects in Bengaluru: What a Complete Home Design Process Looks Like

If you are searching for residential architects in Bengaluru, you are probably wondering one thing: what actually happens after I make the call? A home is a long project, and knowing the stages in advance makes it easier to choose a studio, plan your time and ask the right questions. Here is how a complete residential design journey typically works, and how we structure it at AKAR Architects.

Stage 1: Collaborative discovery

Every good home begins with listening. This stage covers your family and routines, your wish list, your budget range and your plot. We look at the site's orientation, access, surroundings and constraints. The outcome is a clear brief that both sides agree on, so design starts from facts rather than assumptions.

What you can do: gather plot documents, note down daily routines, collect reference images, and decide your realistic budget range.

Stage 2: Creative design and curation

Here the brief becomes space. The studio develops the layout, massing, light and ventilation strategy, circulation and the relationship between indoor and outdoor areas. Materials, textures and finishes begin to take shape. You review concepts, give feedback and refine them together.

What to expect: plans, elevations and visualisations that help you understand the home before it is built, and genuine room for your feedback.

Stage 3: Detailing and coordination

Concept drawings become working drawings. Structure, electrical, plumbing and other services are coordinated with the architecture so that they do not clash on site. Doors, windows, kitchens, bathrooms, joinery and finishes are detailed. This stage is invisible to most clients, and it is where a home's quality is largely decided.

Stage 4: Execution

Construction begins. A good architect stays involved through site visits, clarifications, material approvals and quality checks. Our process places strong emphasis on delivering on time and on budget, supported by clear communication between you, the studio and the construction team.

Stage 5: The reveal

The handover is more than a key ceremony. It is the point where design, interiors and landscape come together and the family sees the home as intended. We think of it as the reveal, and we treat it as a stage in its own right.

> Expert insight: A home feels "effortless" to live in when dozens of unseen decisions, such as door swings, light switches and window positions, have been resolved on drawings rather than on site.

What makes a residential architect right for your project

- They ask about your lifestyle before showing a style.
- They explain the process in stages and in plain language.
- They coordinate architecture, interiors and landscape, rather than treating them as separate jobs.
- They are open about scope, schedule and fees.

- They stay involved during construction.

Common mistakes

- Treating the first sketch as the final design.
- Changing the brief after working drawings are issued.
- Skipping interiors and landscape in early planning, then fitting them in at the end.
- Not asking how site supervision will work.

Why the whole-home view matters

AKAR Architects works across architecture, interior design, landscape design and urban design. For a home, this means the façade, the rooms and the garden can be designed as one idea. A living room that opens to a courtyard, a kitchen that works with natural light, a staircase that doubles as a feature: these come from thinking about the whole.

Conclusion

A strong residential project is the result of a clear process, good listening and careful coordination. When you meet architects in Bengaluru, ask them to walk you through their stages, and compare how each one involves you.

> **CTA** Ready to start your home? Book a project discussion with AKAR Architects. Bring your plot details or even just your ideas, and we will help you map the next steps.

Frequently asked questions

What do residential architects do?

They design homes: layouts, structure coordination, materials, details, approvals support and construction-stage guidance, often with interiors and landscape.

How long does it take to design a house?

It depends on size, complexity and how quickly decisions are made. Design stages usually run for weeks to a few months before construction begins.

What documents do I need to begin?

Plot ownership and approval documents, a site plan or survey, your rough budget and a list of requirements.

Will the architect also design interiors and landscape?

Often, yes, if included in scope. Ask for it to be listed separately so you can see what is covered.

Can I make changes after the design is approved?

Small changes are possible. Major changes after working drawings or construction begins can affect cost and time.

Does the architect visit the site during construction?

A good architect does. Confirm the frequency and what is included in the scope.

Do residential architects in Bengaluru work outside the city?

Some do. AKAR's published client testimonials come from Chennai, Bengaluru, Hyderabad and Kochi, so please enquire about your location.

Blog 5: Architect vs Contractor vs Interior Designer: Who Do You Need First?

Publish date: Wed, 14 Oct 2026 | Primary keyword: architect vs contractor

Architect vs Contractor vs Interior Designer: Who Do You Need First?

Anyone planning a home soon runs into the same confusion: do I need an architect, a contractor, an engineer or an interior designer, and in which order? Hiring in the wrong sequence is one of the most common reasons projects run over budget. This guide explains who does what, how they work together and who to bring in first.

The architect: designs the whole and represents you

An architect translates your brief and your plot into a buildable design. That includes layout, light, ventilation, form, materials, approvals-related drawings, and coordination with the structural engineer and other consultants. During construction, the architect checks that the design is built as intended. The architect is the one professional whose job is to look after your interests across the whole project.

The structural engineer: makes it stand safely

The structural engineer designs the foundations, columns, beams and slabs. The architect and engineer work closely, because layout and structure influence each other.

The contractor: builds it

A contractor manages labour, materials and construction work. Good contractors are essential, but they typically build to the drawings they are given. If the drawings are incomplete, decisions get made on site, often for speed and not for design.

The interior designer: shapes how rooms feel and function

Interior designers plan furniture, joinery, lighting, finishes, colours and fittings. In a new home, interiors should be considered during architecture, since electrical points, plumbing, door positions and storage depend on them.

So who should you hire first?

For a new build, the sensible order is:

1. **Architect.** Before or soon after you buy the plot, to test what the site allows and set the brief and budget.
2. **Structural and services consultants**, coordinated by the architect.
3. **Interior designer**, involved early (often the architect's own team) so that points and layouts are planned together.
4. **Contractor**, appointed once drawings are detailed enough to be priced accurately.

For a renovation, the order is similar: define the scope with a designer first, then price it with contractors.

> Expert insight: Contractors price what is drawn. The more complete the drawings, the more accurate and comparable the quotes you receive.

What about design-build contractors?

Some contractors offer design and construction together. The advantage is a single point of contact. The trade-off is that the same party designs, builds and checks its own work, so you lose an independent check. Whichever route you choose, ask to see drawings, specifications and a clear scope before work begins.

When can you skip the architect?

For minor repairs, repainting or like-for-like replacements, a contractor alone is usually enough. For anything that changes layout, structure, light, ventilation or the look of the building, design input pays for itself.

Common mistakes

- Appointing the contractor first and the architect to "just draw plans".
- Calling the interior designer after plumbing and electrical work is finished.
- Hiring multiple professionals without anyone coordinating them.
- Expecting a contractor's drawings to include the design detail an architect would provide.

How AKAR Architects brings these together

AKAR Architects works across architecture, interior design, landscape design and urban design. For many clients, this reduces the number of separate parties to coordinate, because the building, interiors and outdoor spaces are planned together, from the first discovery conversation through execution.

Conclusion

Think of it as design first, then pricing, then building. Start with an architect, bring interiors in early, and appoint the contractor once the drawings are ready to price.

> **CTA** Not sure which professionals your project needs? Tell AKAR Architects about your plot or property, and we will help you plan the right sequence before you commit to anything.

Frequently asked questions

Should I hire an architect or a contractor first?

For a new build or a major renovation, start with an architect. Appoint the contractor after the drawings are ready to be priced.

What is the difference between an architect and an interior designer?

An architect designs the building as a whole, including layout, structure coordination and approvals. An interior designer focuses on the interior spaces, furniture, finishes and lighting.

Do I need an architect to build a house in Bengaluru?

Plans generally need to be prepared by qualified professionals for approval, and design input improves the result. Confirm current local requirements for your plot.

Is an architect the same as a civil engineer?

No. Architects design spaces and buildings; civil and structural engineers design the structure and its safety. They work together.

Can an architect also manage construction?

Some provide construction-stage supervision or project management. Confirm what is included in the scope.

Is it cheaper to go directly to a contractor?

The upfront cost may look lower, but incomplete design often leads to rework and variations later.

Blog 6: What to Check Before Buying a Plot to Build Your House in Bengaluru

Publish date: Fri, 16 Oct 2026 | Primary keyword: things to check before buying a plot in Bengaluru

What to Check Before Buying a Plot to Build Your House in Bengaluru

A plot can look perfect on a weekend visit and still become an expensive problem once you start building. The legal status, shape, access, soil and orientation of a site all decide what you can build, how much it will cost and how comfortable the home will be. Use this checklist before you pay the token amount.

Note: rules and documentation requirements vary by location and change over time. Verify legal and regulatory points with a qualified lawyer and the relevant authority.

1. Legal documents and ownership

Have a lawyer review the title chain, sale deed, encumbrance certificate and tax records. Confirm that the seller has clear ownership and that no dispute or loan is attached to the property. Never rely on verbal assurances.

2. Khata and approvals

In Bengaluru, the khata status of a property matters. A-khata and B-khata properties are treated differently for approvals, utility connections and bank loans. Check which applies, and what it means for your plan sanction and financing.

3. Land use and layout approval

Confirm that the land is approved for residential use and that the layout in which it sits is approved by the relevant authority. Plots carved out of converted agricultural land need the conversion and approvals to be in order.

4. Road width and access

Road width and frontage influence setbacks, permissible built-up area and parking. A narrow lane can limit construction access and increase cost. Visit the plot with a vehicle and see how materials will reach it.

5. Shape, size and dimensions

Match the documents to reality: measure the plot and verify the boundaries. Irregular shapes are not necessarily bad, but they change the layout and cost. Ask an architect to test how much you can build.

6. Orientation, light and wind

Which way does the plot face? Where does the sun fall in the morning and afternoon? Which direction does the breeze come from? In Bengaluru's moderate climate, a well-oriented home can use daylight and cross-ventilation to stay comfortable. Orientation also matters if you follow Vastu principles.

7. Slope, drainage and soil

Does the plot slope? Does water collect after rain? Is the plot above or below the road level? Consider a soil investigation by a qualified engineer to understand foundation requirements. These factors influence structural cost significantly.

8. Utilities

Check availability of water, sewage connections and electricity. Ask neighbours how they manage supply, and what connections will cost and take. Rainwater harvesting is expected for many properties in Bengaluru, so check current requirements.

9. Neighbourhood and surroundings

Visit at different times of day. Consider noise, traffic, future construction around the plot, privacy, views and the character of the neighbourhood. Talk to people who live nearby.

10. What you are allowed to build

Check the permissible built-up area, height, setbacks and number of floors under the prevailing rules. This tells you whether the plot can hold the home you have in mind.

> Expert insight: Bring your wish list when you visit the plot, not after you buy it. A 30-minute review of a shortlisted plot by an architect can save months of redesign.

Common mistakes

- Paying a token amount before document verification.
- Assuming that the built-up area you want is automatically permissible.
- Ignoring slope and drainage until the monsoon.
- Selecting a plot for price alone, without checking the cost of making it buildable.

Practical tips: a quick site-visit routine

1. Visit at morning, afternoon and evening.
2. Take photos of the plot, road, neighbours and drainage.
3. Note sun, shade and breeze.
4. Bring a measuring tape or request a survey.
5. Share the details with your architect and your lawyer.

How AKAR Architects can help

Before you buy, we can help you test whether a shortlisted plot can hold your brief: layout possibilities, orientation, light, and likely design challenges. This is the kind of question we discuss at the collaborative discovery stage.

Conclusion

Choosing a plot is both a legal and a design decision. Get the documents verified, understand what you can build, and have the site reviewed before you commit.

> **CTA** Have a plot in mind? Share its location, size and your requirements with AKAR Architects, and we will help you understand what the plot can offer before you make a commitment.

Frequently asked questions

What documents should I check before buying a plot in Bengaluru?

Title deeds, sale deed, encumbrance certificate, khata documents, tax receipts and layout approval. Have a lawyer review them.

What is the difference between A-khata and B-khata?

They are categories of property records that affect approvals, utility connections and loans. Verify the current implications with a lawyer or the authority.

Which direction should a plot face?

There is no single best direction. Orientation affects light, heat and ventilation, and some families also consider Vastu. An architect can advise based on the site.

Should I get a soil test before buying?

A soil investigation is advisable before finalising foundation design, and it helps to know the likely conditions before you buy.

Can an architect review a plot before I buy it?

Yes. An early review of size, shape, orientation and constraints helps you decide with more confidence.

How do I find out how much I can build on my plot?

It depends on zoning, road width, setbacks and other local rules. An architect can check this against current regulations.

Blog 7: House Construction Budget in Bengaluru: What Drives the Cost and How to Plan It

Publish date: Mon, 19 Oct 2026 | Primary keyword: house construction budget Bengaluru

House Construction Budget in Bengaluru: What Drives the Cost and How to Plan It

"What will it cost to build my house?" is the question behind most enquiries we hear. A single per-square-foot figure is tempting, but it hides more than it reveals. Construction rates change with materials, labour, specifications and time, so any number quoted without context can mislead. This guide explains what actually drives the cost of a home in Bengaluru and how to plan a budget you can trust. For current rates, always request itemised quotations.

What drives construction cost

Built-up area and number of floors. More area means more cost, but compact, efficient plans reduce wasted space.

Structure and site conditions. Soil, slope and foundation type influence structural cost. A plot that needs deep foundations or retaining walls costs more than a level one.

Design complexity. Large cantilevers, double-height spaces, curved forms and custom details add cost. Simple, well-proportioned forms are cost-efficient.

Level of specification. Flooring, sanitaryware, windows, doors, lighting and kitchens have a wide range. This is often where the largest difference between two houses of the same size arises.

Services. Electrical, plumbing, water storage, solar, home automation and air conditioning add layers of cost.

Timing and market conditions. Material and labour prices change. A long delay can raise the cost of the same scope.

What to include beyond construction

Many budgets fail because they only count the main structure. Add:

- Design and consultant fees
- Approvals and utility connections
- Compound wall, gate, driveway and landscape
- Interiors: joinery, furniture, curtains and decor
- Fixtures and fittings
- Soil investigation and surveys
- Shifting and housewarming costs
- Contingency reserve

> Expert insight: Treat the contingency as part of the budget, not as extra. A reserve of around ten to fifteen percent is a common planning rule of thumb, adjusted to the project's certainty.

How to build a budget in five steps

1. **Set the ceiling.** Decide the maximum you are comfortable spending in total, including soft costs and interiors.
2. **Split by category.** Allocate approximate shares to structure, finishes, services, landscape, interiors and contingency.
3. **Test it against the brief.** Ask your architect whether your wish list fits. If not, decide what to trade.

4. **Get itemised quotes.** Ask contractors for a bill of quantities against complete drawings, so quotes can be compared line by line.
5. **Review at milestones.** Track spending at each stage and adjust before it is too late to change.

Ways to save without damaging quality

- Choose a compact, efficient plan over a sprawling one.
- Keep the form simple and invest in a few well-chosen details.
- Finalise decisions before construction. Changes on site are the costliest.
- Spend on what you cannot easily change later: structure, waterproofing, windows and services.
- Phase non-critical items, such as some furniture and landscaping.

Common mistakes

- Using a per-square-foot figure heard from a friend as the full budget.
- Choosing finishes after the structure is done and discovering the budget is gone.
- Appointing a contractor before the drawings and specifications are complete.
- Forgetting that a larger home also increases running and maintenance cost.

How AKAR Architects approaches budget

We talk about budget in the first conversation, not the last. During collaborative discovery, we look at your brief, your plot and your range together, and tell you honestly what is achievable and where trade-offs may be needed. Our process emphasises delivering on time and on budget, which starts with a design that is realistic from day one.

Conclusion

A reliable budget comes from complete drawings, itemised quotes, an honest contingency and early decisions. Avoid quick numbers and build the figure up from scope.

> **CTA** Have a budget range in mind? Share it with AKAR Architects along with your plot and requirements, and we will tell you honestly what is possible and where to make trade-offs.

Frequently asked questions

How much does it cost to build a house in Bengaluru?

It depends on area, specification, site conditions and market rates at the time. Get itemised quotes based on complete drawings for a reliable figure.

What costs are not included in construction cost?

Design fees, approvals, utility connections, compound wall, landscape, interiors and furniture, fixtures and contingency are often missed.

How much contingency should I plan?

A common rule of thumb is ten to fifteen percent, adjusted for project complexity and uncertainty.

How can I reduce construction cost without compromising quality?

Choose an efficient plan, keep the form simple, finalise decisions early and protect spending on structure, waterproofing and services.

Does a bigger plot always mean a bigger cost?

Not necessarily. Cost depends on built-up area and specification, not plot size alone. Site conditions also play a role.

Should I fix the budget before or after hiring an architect?

Set a rough ceiling first, then refine it with your architect. They can show whether your brief fits it.

Blog 8: Luxury Villa Design: What Makes a Villa Feel Truly Luxurious (It Isn't Just Marble)

Publish date: Wed, 21 Oct 2026 | Primary keyword: luxury villa design

Luxury Villa Design: What Makes a Villa Feel Truly Luxurious

Walk into a villa that feels truly luxurious and you rarely think about price. You notice the light, the calm, the way spaces flow and how nothing feels forced. Luxury is a result of design decisions more than of expensive materials. This guide looks at the principles behind well-designed villas and how to brief an architect for yours.

1. Proportion and volume

Rooms feel generous when their height, width and depth are in balance. A double-height living area, a well-proportioned entrance or a carefully scaled corridor does more for the feel of a villa than extra square footage. Large rooms with poor proportion often feel emptier, not richer.

2. Light as a material

Good villas are designed around how light moves through the day. Skylights, clerestories, carefully placed windows and courtyards bring in daylight without glare or heat. In a moderate climate like Bengaluru's, thoughtful orientation can keep spaces bright and comfortable while using less energy.

3. Privacy with openness

Villa living is about seclusion. The challenge is to keep the home connected to its garden and views while shielding it from neighbours and the street. Screens, level changes, landscaping and layered thresholds create privacy without making the house feel closed.

4. Flow between inside and outside

Verandahs, courtyards, terraces and gardens extend the living space. When landscape is designed with the architecture, as part of one idea, outdoor spaces feel intentional and not leftover.

5. Materials with honesty and restraint

Luxury is often quieter than expected: stone, timber, metal, plaster and glass used consistently and in fewer variations. A limited palette, carefully detailed, tends to look more refined than many materials competing for attention. Choose materials for how they age as well as how they look on day one.

6. Detailing and craftsmanship

Junctions between floor and wall, door and frame, ceiling and light are where quality shows. Flush skirting, concealed tracks, aligned joints and well-designed joinery are decisions made on drawings. They separate a well-crafted villa from an expensive one.

7. Layered lighting

Beyond a single ceiling light, think ambient, task and accent layers. Warm, controlled lighting shapes mood and highlights materials, art and architecture.

8. Services that disappear

Air-conditioning, wiring, plumbing and automation should be integrated, not visible. Planning them early keeps ceilings clean and rooms uncluttered.

9. Storage and everyday ease

A villa that works every day feels luxurious. Plan generous storage, service routes for staff, separate guest and family zones, and spaces for the way your family really lives.

> Expert insight: Luxury is the absence of friction. When doors, storage, lighting and circulation work effortlessly, the home feels refined, whatever the finish.

Common mistakes in villa design

- Adding features without a clear idea tying them together.
- Choosing materials from separate showrooms with no unified palette.
- Treating landscape and interiors as afterthoughts.
- Ignoring maintenance: large glazing, delicate finishes and water features need care.
- Designing for show rather than daily use.

How to brief an architect for a villa

- Describe how your family lives, entertains and works.
- Share references, and say what you like about each one.
- Be clear about privacy, security and staff requirements.
- Discuss maintenance expectations and long-term plans.
- Decide your budget range early, so ideas stay realistic.

How AKAR Architects approaches homes

AKAR Architects describes itself as "architects of emotions, creators of memorable experiences, and builders of dreams", and our design approach reflects that. Architecture, interiors and landscape are developed together, guided by a collaborative discovery stage that brings out what makes your home personal.

Conclusion

A luxurious villa is built on proportion, light, privacy, restraint and craft. Start with a strong brief and a design team that treats the building, interiors and landscape as one.

> **CTA** Planning a villa? Tell AKAR Architects about your plot, your family and your vision, and we will set up a conversation about how to bring it to life.

Frequently asked questions

What makes a villa design luxurious?

Proportion, natural light, privacy, quality materials used with restraint, careful detailing and layouts that make daily life effortless.

How do I choose a villa architect in Bengaluru?

Look for experience with similar homes, a clear process, transparent fees and an approach that includes interiors and landscape.

How long does it take to design a villa?

It depends on size and complexity, and on how quickly decisions are made. Design and detailing usually take months before construction begins.

Should the same team design the villa and its interiors?

Doing so helps keep the architecture, interiors and landscape consistent, and avoids late clashes with services and joinery.

Is a larger villa always more luxurious?

No. Good proportions, light and planning matter more than size.

How can I make a villa sustainable?

Use orientation, shading, cross-ventilation, daylight, efficient systems and durable materials chosen at design stage.

Blog 9: Vastu and Modern Architecture: How to Balance Both in Your Home Design

Publish date: Fri, 23 Oct 2026 | Primary keyword: Vastu for home design

Vastu and Modern Architecture: How to Balance Both in Your Home Design

For many families in India, Vastu is part of how a home is imagined. Alongside that sits a modern brief: open plans, large windows, work-from-home spaces, compact plots and tight budgets. The two are often presented as opposites. In practice, a good architect can usually accommodate both. The key is knowing which Vastu preferences are important to your family, and designing the plan around them from the start rather than adjusting it afterwards.

Note: Vastu is a traditional system, and families follow it to different degrees. This article is about how to plan with it in a practical way. It does not make claims for or against it.

Start by deciding how much Vastu matters to you

Some families want strict adherence; others want key principles; others only want to avoid specific "problem" placements. Tell your architect this at the first meeting. A clear position helps the architect plan the layout rather than redesign it after review by a Vastu consultant.

Where Vastu and good design overlap

Many commonly cited principles align with sensible planning:

- **Orientation and daylight.** Placing openings to welcome morning light and manage harsh afternoon sun matches good environmental design.
- **Cross-ventilation.** Open, airy centres and well-placed windows serve comfort as well as tradition.
- **Entrances.** A clear, welcoming main entrance is good design and a Vastu priority.
- **Natural light in the kitchen.** Common Vastu guidance places the kitchen toward the south-east, which can also help with morning light and ventilation.

Typical placements families ask for

These are commonly cited guidelines and vary by school of thought and by consultant:

- Main entrance toward the north, north-east or east, depending on the plot
- Kitchen in the south-east
- Master bedroom in the south-west
- Prayer room in the north-east
- Staircase in the south, west or south-west
- Toilets away from the north-east

Treat these as inputs, not rules that override structure, safety or function.

Where conflicts appear

- **Plot orientation.** A south-facing or irregular plot may make some placements impossible without compromise.
- **Small plots.** On compact plots, a strict Vastu layout may reduce usable space or create awkward rooms.
- **Modern requirements.** Open kitchens, home offices and attached bathrooms do not always fit traditional planning.
- **Structural logic.** Columns, beams, services and staircases must make sense structurally.

How architects reconcile the two

1. **Establish priorities.** List must-haves, preferable and flexible items.
2. **Test the plot.** Check orientation and dimensions before drawing.
3. **Prepare options.** Develop two or three layouts showing how priorities are met.
4. **Coordinate with a Vastu consultant** if your family wants one, early in the process, not at the end.
5. **Choose the best compromise.** Pick the layout that serves daily life and respects your priorities.

> Expert insight: Share your Vastu requirements before the first sketch. Changing a completed layout to satisfy a late review is the costliest way to design.

Common mistakes

- Buying a plot for its direction alone without checking buildability.
- Accepting a rigid plan that wastes area or light.
- Getting Vastu advice after drawings are finalised.
- Letting several advisors give conflicting instructions.

Practical tips

- Bring your plot orientation and Vastu preferences to the first meeting.
- Rank your preferences in order of importance.
- Ask for layout options, not a single plan.
- Review daily use: do the routes between kitchen, dining and living make sense?

How AKAR Architects approaches this

Our collaborative discovery stage is where we listen to how you live and what matters to your family, including Vastu. We then develop the design so that traditional preferences, light, ventilation and modern living work together.

Conclusion

Vastu and modern design are not enemies. When priorities are shared early and the plan is tested on the real plot, you can have a home that respects tradition and works for today.

> **CTA** Want a home that honours your Vastu preferences and still feels modern and open? Tell AKAR Architects about your plot and priorities, and we will explore the layout options with you.

Frequently asked questions

Can a modern house be Vastu compliant?

In many cases, yes. It depends on plot orientation, size and how strictly you want to follow it. Early planning helps.

Should I consult a Vastu expert before or after the architect?

Share Vastu preferences with your architect at the start. If you use a Vastu consultant, involve them early in the layout stage.

Which plot direction is best for Vastu?

Opinions vary across schools. Rather than a single best direction, check how well your preferred placements can be achieved on the specific plot.

Does following Vastu increase construction cost?

Not necessarily. Cost depends on area and specification. Layout compromises or late changes are what usually add cost.

Can Vastu be adapted for small plots or apartments?

Often with compromises. Prioritise the principles that matter most to you and test layout options.

Do architects in Bengaluru design Vastu-friendly homes?

Many do, if you share your requirements at the beginning of the project.

Blog 10: Office Interior Design in Bengaluru: How to Plan a Workspace That Actually Works

Publish date: Mon, 26 Oct 2026 | Primary keyword: office interior design Bengaluru

Office Interior Design in Bengaluru: How to Plan a Workspace That Actually Works

A good office does not just look professional. It affects how your team collaborates, concentrates and feels about coming to work, and how clients perceive your business. Yet many offices are designed backwards: furniture is selected first and the layout is squeezed around it. This guide explains how to plan a workspace in Bengaluru that supports the way your business actually runs.

Start with how your team works

Before looking at finishes, map your work. How many people are in the office on a typical day? How many meetings are internal and how many with clients? Who needs quiet focus and who collaborates all day? Does the team work hybrid? These answers shape the plan far more than colour or furniture.

Plan for growth

Fit-outs are expensive to redo. Ask where your team will be in two or three years, and plan a layout that can add desks, rooms or functions without rebuilding. Flexible furniture, modular partitions and services provisioned for expansion help.

Zone the space

A workable office usually balances these zones:

- **Reception and waiting.** The first impression of your brand.
- **Workstations.** Planned around ergonomics, light and noise.
- **Focus areas.** Quiet rooms or pods for concentrated work.
- **Collaboration areas.** Open spaces for informal discussions.
- **Meeting rooms.** In the sizes you actually need, with acoustic privacy.
- **Cabins and leadership spaces.** Where appropriate to your culture.
- **Pantry and breakout.** Often where culture happens.
- **Support spaces.** Storage, server or IT, print and restrooms.

Light, acoustics and comfort

Daylight. Position workstations to use daylight without glare on screens. Avoid placing fully enclosed rooms along windows where open areas could benefit.

Acoustics. Noise is a leading complaint in open offices. Use soft surfaces, ceiling treatments, partitions and careful zoning to separate loud from quiet areas.

Lighting. Combine general lighting with task lighting. Warmer lighting in breakout areas helps spaces feel different from workstations.

Air and temperature. Air-conditioning layout, fresh air and thermal comfort affect the entire day. Coordinate with the building's systems early.

Brand and identity

Your office is a physical expression of your brand. Colours, materials, graphics and the reception experience should reflect who you are, without becoming a stage set. Restraint and quality read as confidence.

Compliance and building coordination

Offices must meet fire and life-safety, electrical and accessibility requirements, and often need building management or landlord approvals. Check your lease for fit-out rules, handover conditions and working hours, and involve the designer before finalising a space.

Budget and timeline

Cost depends on area, specification, services such as HVAC and electrical, joinery and furniture, and the complexity of the design. A realistic timeline includes design, approvals, procurement and execution, with buffer for lead times. Decide on key finishes and furniture early, because late changes cause the most delay.

> Expert insight: The cheapest time to fix a layout problem is on paper. A short test-fit of your headcount and room needs against the actual floor plate before you sign a lease can prevent months of regret.

Common mistakes

- Choosing the space before testing whether the plan fits.
- Copying a layout from another company with a different way of working.
- Ignoring acoustics until the office is occupied.
- Underestimating electrical and network requirements.
- Forgetting storage and support areas.

Practical tips

1. Collect headcount, growth and meeting needs before the first design meeting.
2. Ask for a test-fit on the floor plan before signing a lease.
3. Prioritise a few spaces that matter most, such as reception, meeting rooms and the pantry.
4. Set aside a contingency within the budget.
5. Plan furniture and lighting along with the layout.

How AKAR Architects approaches workspaces

Corporate workspaces are among the segments AKAR Architects works in, alongside residential, commercial and restaurant design. We begin by understanding how your business operates, then move through creative design and curation and into execution, with a focus on delivering on time and on budget.

Conclusion

A workspace works when its layout follows your business, not the other way around. Start with how your team works, plan for growth, and test the plan before you commit.

> **CTA** Planning a new office or a refit in Bengaluru? Share your headcount, floor area and timeline with AKAR Architects, and we will discuss how to shape a workspace around your business.

Frequently asked questions

How do I plan an office layout?

Begin with headcount, work style and growth plans. Then zone the space for focus, collaboration, meetings and support, and test it on the floor plan.

What is a test-fit?

A quick layout study showing whether your requirements fit a given floor plate. It is useful before you sign a lease.

What affects the cost of office interiors?

Area, specification, HVAC, electrical and network needs, joinery, furniture, lighting and the complexity of the design.

How long does an office fit-out take?

It depends on size and complexity. Design, approvals, procurement and execution each take time, so plan with a buffer.

How do I improve acoustics in an open office?

Zone noisy and quiet areas, use soft finishes and ceiling treatments, and provide meeting rooms and focus spaces.

Do I need landlord or building approvals?

Most commercial buildings have fit-out guidelines. Check your lease and building management early.

Blog 11: Home Renovation Planning: The Right Order of Work, Budget and Timeline

Publish date: Wed, 28 Oct 2026 | Primary keyword: home renovation planning

Home Renovation Planning: The Right Order of Work, Budget and Timeline

Renovation looks simpler than building new, until the first wall is opened. Hidden pipes, old wiring, uneven floors and unexpected structural limits can turn a tidy plan into months of dust. The best protection is a plan: a clear scope, the right order of work, a budget with real contingency and a team that knows who is responsible for what.

Note: Structural alterations, apartment society rules and local regulations vary. Always get written approvals and a qualified engineer's advice before changing structure.

Step 1: Define the scope

Decide what level of change you want:

- **Cosmetic refresh:** paint, lighting, curtains, furniture and decor.
- **Functional upgrade:** kitchens, bathrooms, storage, flooring, joinery.
- **Layout change:** moving or removing walls, merging rooms, adding openings.
- **Structural or extension work:** adding floors, changing the load-bearing elements or expanding the footprint.

The more you change, the more professionals are involved and the more important it is to plan.

Step 2: Survey what exists

Have the existing home measured and assessed. Check plumbing, electrical wiring, waterproofing, damp, structure and ceiling heights. A good survey reveals problems before they become surprises.

Step 3: Set priorities and a budget

List what must be done now, what can wait and what is a wish. Include design fees, labour and materials, fixtures, furniture and a contingency. Renovation tends to uncover hidden conditions, so a contingency higher than for new construction is prudent. Many planners keep fifteen to twenty percent as a rule of thumb.

Step 4: Design before demolition

Plan the new layout, services, lighting, storage and finishes on drawings. Select key materials and fixtures early, because lead times can slow projects. Decisions made after demolition cost more.

Step 5: Follow the right order of work

A commonly sensible sequence is:

1. Approvals and permissions, where required
2. Strip-out and demolition
3. Structural changes, if any
4. Civil work: new walls, openings, levelling
5. Plumbing and electrical rough-in
6. Waterproofing and testing in wet areas
7. False ceilings and lighting provisions
8. Plastering and wall preparation
9. Flooring and tiling
10. Joinery and carpentry

11. Painting and polish
12. Fixtures, fittings and electrical finishing
13. Deep clean, furniture and styling

> Expert insight: Doing things out of order, such as painting before joinery or installing flooring before overhead work, is the most common source of rework in renovations.

Step 6: Plan to live through it

Decide whether to stay or move out. Staying saves rent but extends the timeline and the dust. If you stay, phase work room by room, protect finished areas, and keep one functional kitchen and bathroom. Agree working hours and apartment-society rules in advance.

Step 7: Keep one point of coordination

Renovations involve many trades. Appoint one person, such as the designer or project lead, to coordinate schedule, quality and changes. Without it, trades wait on each other and delays grow.

Common mistakes

- Starting demolition before the design is final.
- Underestimating the cost of hidden defects.
- Changing the plan midway.
- Choosing finishes after the work has begun.
- Ignoring waterproofing in bathrooms, terraces and balconies.

Practical tips

- Photograph and measure everything before starting.
- Keep a list of decisions and approval dates.
- Order long-lead items such as tiles, sanitaryware and custom furniture early.
- Do a walk-through before final payments and keep a snag list.

How AKAR Architects can help

AKAR Architects works across architecture and interior design, which allows layout, services and finishes to be thought through together. Our collaborative discovery stage is the best place to define scope and priorities before any work starts.

Conclusion

Good renovations are won on paper. Define the scope, survey the existing home, design before demolition and respect the order of work.

> **CTA** Thinking about refreshing or reworking your home? Send AKAR Architects a few photos and a short brief, and we will discuss what is possible and how to approach it.

Frequently asked questions

What is the correct order for renovating a house?

Typically approvals, demolition, structural work, civil work, plumbing and electrical, waterproofing, ceilings, plastering, flooring, joinery, painting and finishing.

How much contingency should I keep for a renovation?

Many planners keep fifteen to twenty percent because hidden conditions are common. Adjust to the age and condition of the property.

How long does a home renovation take?

It depends on scope. Cosmetic updates take weeks; layout changes and full-home renovations can take months.

Can I live in my house during renovation?

Often yes for partial work if phased carefully, but expect dust, noise and disruption.

Do I need an architect for a renovation?

For layout, structural or major changes, design input helps avoid costly mistakes. For cosmetic work, a designer or contractor may suffice.

Do I need permission to renovate an apartment?

Usually you need your society's approval, and structural changes require professional advice and possibly authority approvals.

Blog 12: Landscape Design for Homes and Villas: Planning a Garden That Lasts

Publish date: Fri, 30 Oct 2026 | Primary keyword: landscape design for homes

Landscape Design for Homes and Villas: Planning a Garden That Lasts

Landscape is often the last item on a home project, planned with whatever budget and space remain. This is why many gardens look like an afterthought: a strip of lawn, a few pots and a path that does not lead anywhere. A garden planned with the house, not after it, becomes part of how the home lives and feels. Here is how to plan one that lasts.

Think of landscape as rooms, not decoration

Divide the outdoors by purpose, just as you would indoors:

- **Arrival:** the gate, driveway and approach. It sets the tone.
- **Sit-out and entertaining areas:** shaded seating, a barbecue corner, a lawn for gatherings.
- **Play and activity:** space for children, pets or yoga.
- **Quiet corners:** a bench under a tree, a courtyard with a water feature.
- **Utility and kitchen garden:** herbs, vegetables, composting, service access.

Link these rooms to the interiors: a living room that opens to a courtyard feels larger, and a bedroom that faces a green view feels calmer.

Start with site and climate

Study the sun path, wind, slope and drainage. Bengaluru's moderate climate supports a wide range of plants, but light, rainfall and soil vary by site. Choose species suited to the local climate, with an eye on mature size, root behaviour and maintenance. A local nursery or landscape professional can confirm what thrives in your area.

Plan water carefully

Good drainage prevents puddles and damp walls. Slope surfaces away from the building, and plan rainwater harvesting and recharge where required or possible. Irrigation, whether drip or sprinklers, should be designed with the planting, not added later. Water features add beauty but need maintenance and safe design.

Choose plants for the long term

- Match plants to light conditions: sun, partial shade or shade.
- Prefer species that suit the local rainfall and temperature.
- Plan trees for shade and privacy, but away from foundations, drains and boundary walls.
- Layer planting: trees, shrubs, ground cover.
- Mix seasonal colour with evergreen structure so the garden looks good all year.

Hardscape matters as much as plants

Paving, steps, edges, retaining walls, seating and boundary elements form the garden's skeleton. Choose materials that complement the building and tolerate rain and wear. Non-slip surfaces matter around water and steps.

Light the garden

Well-planned outdoor lighting extends the use of the space into the evening and adds security. Use soft, warm lights to highlight trees, paths and steps, avoiding glare and light spill into neighbours' homes.

Terraces and podium gardens

On a slab, soil depth, waterproofing, drainage and structural load all need to be planned with the architect and engineer. Lightweight soil mixes, root barriers and proper drainage layers protect the structure.

Plan for upkeep

A beautiful garden is a maintained one. Be honest about how much time and money you can invest. Low-maintenance planting, efficient irrigation and durable hardscape reduce effort. Decide who will maintain the garden and budget for it.

> Expert insight: A landscape plan made at the same time as the architecture can use the same materials, levels and sight lines. The result feels like one idea instead of a house with a garden attached.

Common mistakes

- Planting trees too close to the building or boundary wall.
- Ignoring drainage and slope.
- Choosing plants for how they look in a nursery, not for their mature size.
- Leaving landscape out of the budget.
- Skipping outdoor lighting.

How AKAR Architects approaches landscape

Landscape design is one of the disciplines AKAR Architects works in, alongside architecture, interior design and urban design. When landscape is part of the project from the discovery stage, outdoor and indoor spaces are planned together.

Conclusion

A lasting garden begins with site, climate and purpose. Plan it with the house, choose plants and materials for the long term and be realistic about upkeep.

> **CTA** Building or remodelling a home? Ask AKAR Architects to include the landscape in your project brief from day one, so that your house and its outdoor spaces work together.

Frequently asked questions

When should I plan landscape design for a new home?

At the same time as the architecture. It affects levels, drainage, services and budget.

How can I design a low-maintenance garden?

Use climate-suited plants, drip irrigation, durable hardscape and simple layouts. Match the design to the time you can spend.

What plants suit gardens in Bengaluru?

Many species do well in the moderate climate, but suitability depends on light, soil and space. Consult a local nursery or landscape professional.

How much should I budget for landscaping?

It varies widely by size and ambition. Include landscape in the overall project budget from the beginning, so it is not left with leftovers.

Can I have a garden on a terrace?

Yes, with proper waterproofing, drainage, load planning and soil depth. Coordinate with your architect and engineer.

Should the architect and landscape designer work together?

Yes. Coordinated levels, drainage and materials produce a more cohesive result.

Post on: Mon, 5 Oct 2026 | Blog: How to Choose an Architect in Bengaluru: 9 Things to Check Before You Hire

Most people choose their architect by scrolling through portfolios. That is the easiest way to pick the wrong one.

A beautiful photograph tells you almost nothing about how a studio handles budgets, communication, approvals or site problems. Those are the things that decide whether your home gets built the way it was drawn.

Before you hire an architect in Bengaluru, check these five things:

- COA registration (it takes two minutes to verify)
- Projects similar to yours in size and budget
- A written process and a clear fee scope
- Who actually visits the site, and how often
- A conversation with at least one past client

If the architect asks you more questions than you ask them in the first meeting, that is usually a good sign.

We have put together a full 9-point checklist, with the questions to ask in your first meeting. Read it here: [link to blog]

Post on: Wed, 7 Oct 2026 | Blog: Architect Fees in India: How Architects Charge and What Your Fee Should Include

"What do architects charge?" is the question we hear most from first-time home builders.

The honest answer: it depends on scope. And that is exactly why two proposals for the same house can differ so much.

In India, architects commonly charge in one of three ways:

- A percentage of construction cost
- A rate per square foot
- A fixed fee for a defined scope

What matters more than the method is what the fee includes. Before you compare numbers, ask:

- Are working drawings and consultant coordination included?
- How many site visits are covered?
- Are interiors and landscape in or out?
- How many design revisions are included?
- What is the stage-wise payment schedule?

A low fee with a thin scope often turns into cost on site.

Our guide explains how to compare architect proposals properly: [link to blog]

If you are planning a project and want a clear conversation on scope, AKAR Architects is happy to talk.

Post on: Fri, 9 Oct 2026 | Blog: 10 Expensive Mistakes to Avoid Before Building Your Dream Home

Most home-building mistakes are made before the first brick is laid.

Here are five we see most often:

1. Buying the plot before involving an architect
2. Starting without a written family brief
3. Budgeting for construction but not for approvals, landscape, fixtures and contingency
4. Hiring a contractor before drawings are complete
5. Copying a plan designed for a different plot and orientation

The fix is not complicated. Write a one-page brief. Agree a total budget with a contingency. Finish the design before you start building. And bring in an architect early, when advice costs the least and saves the most.

We have listed all 10 mistakes, with practical ways to avoid each: [link to blog]

Post on: Mon, 12 Oct 2026 | Blog: Residential Architects in Bengaluru: What a Complete Home Design Process Looks Like

Searching for a residential architect and wondering what actually happens after the first call?

Here is how a complete home design journey works, in five stages:

1. Discovery: understanding your family, routines, plot and budget
2. Design and curation: layouts, light, ventilation, materials, visualisations
3. Detailing: working drawings, with structure and services coordinated
4. Execution: site visits, clarifications, quality checks
5. The reveal: the handover, when the whole home comes together

Most of the quality in a home is decided in stage 3, the part clients rarely see.

When you meet architects, ask them to walk you through their stages. It will tell you more than any portfolio.

Full breakdown here: [link to blog]

Post on: Wed, 14 Oct 2026 | Blog: Architect vs Contractor vs Interior Designer: Who Do You Need First?

Architect, contractor, structural engineer, interior designer: who do you hire first?

Getting the sequence wrong is one of the quiet reasons home projects overshoot their budgets.

Here is a simple way to think about it:

- Architect: designs the whole and protects your interests
- Structural engineer: makes it stand safely
- Interior designer: shapes how rooms work and feel (involve early)
- Contractor: builds what has been drawn

Design first, then pricing, then building.

Contractors can only price what has been drawn. The more complete the drawings, the more accurate and comparable your quotes will be.

The exception: small repairs and like-for-like replacements, where a contractor alone is usually enough.

Our guide goes through each role and the right order to hire them: [link to blog]

Planning a project in Bengaluru? Talk to AKAR Architects about the sequence.

Post on: Fri, 16 Oct 2026 | Blog: What to Check Before Buying a Plot to Build Your House in Bengaluru

Before you buy a plot to build your home in Bengaluru, check these 6 things:

1. Legal documents (reviewed by a lawyer, not assumed)
2. Khata status (A-khata and B-khata are treated differently)
3. Layout approval and land-use status
4. Road width and access (affects setbacks and construction cost)
5. Orientation, light and wind
6. Slope, drainage and soil

A plot can look perfect on a weekend visit and still cost you far more to make buildable.

One more tip: ask an architect to review the shortlisted plot before you pay the token amount. Thirty minutes of advice at this stage can save months of redesign later.

Full 10-point checklist: [link to blog]

Have a plot in mind? AKAR Architects can help you test what it can hold.

Post on: Mon, 19 Oct 2026 | Blog: House Construction Budget in Bengaluru: What Drives the Cost and How to Plan It

"How much will my house cost per square foot?"

It is the most common question we hear. And the most misleading.

A single per-square-foot number hides what actually drives cost:

- Plot conditions (slope, soil, access)
- Design complexity
- Level of specification (finishes, fixtures, windows)
- Services (electrical, plumbing, solar, HVAC)
- Timing and market rates

And it ignores everything outside construction: design fees, approvals, compound wall, landscape, interiors and a 10 to 15 percent contingency (a common planning rule of thumb).

A reliable budget is built up from complete drawings and itemised quotes, not from a number a friend heard.

Our guide shows how to build one in 5 steps: [link to blog]

Have a budget range? Share it with AKAR Architects and get an honest feasibility discussion.

Post on: Wed, 21 Oct 2026 | Blog: Luxury Villa Design: What Makes a Villa Feel Truly Luxurious (It Isn't Just Marble)

Luxury in a villa is rarely about marble.

When you walk into a well-designed home, you notice other things: the quality of light, the calm between rooms, the way a garden is part of the house, the way nothing feels forced.

Nine things that shape that feeling:

1. Proportion and volume
2. Light that moves through the day
3. Privacy with openness
4. Seamless inside-outside flow
5. A restrained, honest material palette
6. Detailing at junctions and edges
7. Layered lighting
8. Services that disappear
9. Storage and everyday ease

The best test of luxury: how little friction there is in daily life.

Read the full guide, including how to brief your architect: [link to blog]

Post on: Fri, 23 Oct 2026 | Blog: Vastu and Modern Architecture: How to Balance Both in Your Home Design

"Can we have a modern home that also follows Vastu?"

We hear this often, and the answer is usually yes, with a clear brief and early planning.

A few things we tell clients:

- Decide how much Vastu matters to your family before the first sketch
- Rank your preferences: must-have, preferable, flexible
- Many principles overlap with good design: daylight, cross-ventilation, a clear entrance, a well-lit kitchen
- On small or irregular plots, ask for two or three layout options rather than one fixed plan
- If you use a Vastu consultant, involve them before drawings are final

The costliest way to design is to change a finished layout after a late review.

Our guide explains how architects reconcile tradition with modern living: [link to blog]

Planning a home with Vastu preferences? Talk to AKAR Architects.

Post on: Mon, 26 Oct 2026 | Blog: Office Interior Design in Bengaluru: How to Plan a Workspace That Actually Works

Most offices are designed backwards: furniture first, layout squeezed in later.

If you are planning a workspace in Bengaluru, start here:

1. Map how your team really works (focus vs collaboration, hybrid vs in-office, client meetings)
2. Plan for 2 to 3 years of growth, not just today
3. Zone the space: reception, workstations, focus areas, collaboration, meeting rooms, pantry, support
4. Treat acoustics and daylight as design decisions, not afterthoughts
5. Ask for a test-fit on the floor plan before you sign the lease

The cheapest time to fix a layout problem is on paper.

Our full guide to planning an office interior is here: [link to blog]

Planning an office? Share your headcount and timeline with AKAR Architects.

Post on: Wed, 28 Oct 2026 | Blog: Home Renovation Planning: The Right Order of Work, Budget and Timeline

Renovation looks simple until the first wall is opened.

Hidden pipes, old wiring, damp and structural surprises are common. The best protection is a plan.

The order of work that prevents most rework:

1. Approvals
2. Strip-out
3. Structure
4. Civil work
5. Plumbing and electrical
6. Waterproofing
7. Ceilings
8. Plastering
9. Flooring
10. Joinery
11. Painting
12. Fixtures and finishing

Painting before joinery or flooring before overhead work is the most common reason for redoing work.

Also: keep 15 to 20 percent as contingency, order long-lead items early and design before you demolish.

The full step-by-step guide: [link to blog]

Planning a renovation? Talk to AKAR Architects.

LinkedIn post for Blog 12

Post on: Fri, 30 Oct 2026 | Blog: Landscape Design for Homes and Villas: Planning a Garden That Lasts

A home without a planned landscape is a house with a garden attached.

Most gardens are designed last, with whatever space and budget remain. A path that goes nowhere, a strip of lawn, a few pots.

When landscape is planned with the architecture:

- Outdoor spaces become rooms (arrival, sit-out, play, quiet corner, kitchen garden)
- Drainage, levels and rainwater harvesting are resolved early
- Trees are placed for shade and privacy, away from foundations
- Hardscape and lighting echo the building's materials
- Maintenance is considered before planting, not after

The result feels like one idea.

Our full guide to planning a garden that lasts: [link to blog]

Building or remodelling a home? Ask AKAR Architects to include landscape from day one.

Companion to: How to Choose an Architect in Bengaluru: 9 Things to Check Before You Hire

A Homeowner's Checklist for Vetting an Architect Before You Sign

Hiring an architect is one of the largest decisions in any building project, yet most people decide in a single meeting. A simple checklist makes the choice clearer and protects your budget.

Start with credentials and fit

In India, practising architects must be registered with the Council of Architecture. Verify the number first. Then ask for two or three projects closest to yours in scale and budget. A studio's best work in a different category tells you less than a modest, relevant project.

Judge the process, not just the portfolio

Photographs show outcomes. They do not show how decisions were made. Ask the architect to walk you through the stages: understanding your brief, concept design, detailed drawings, coordination and site support. A clear explanation is a strong sign of a disciplined practice.

Clarify money early

Ask how fees are calculated and what they include. Concept design, working drawings, consultant coordination and site visits can be bundled or charged separately. A written scope removes surprises.

Listen for questions

The best architects ask about your daily routine, family, work-from-home habits and long-term plans before they discuss style. If you are only asked about size and budget, the design is likely to be generic.

Talk to someone who has been through it

A short call with a past client reveals more than any brochure: how changes were handled, how communication felt, how the project ended.

Studios such as AKAR Architects in Bengaluru publish their process and client testimonials openly, which makes this kind of comparison easier. You can read their full 9-point guide to choosing an architect on the AKAR Architects blog.

> **Backlink placement:** link the phrase "full 9-point guide to choosing an architect" to the website blog URL; link "AKAR Architects" to the homepage.

Companion to: Architect Fees in India: How Architects Charge and What Your Fee Should Include

Comparing Architect Proposals: What Your Fee Actually Buys

When two architects quote very different amounts for the same house, the gap is rarely about quality alone. It is usually about what is, and is not, included.

Three fee models you will see

Architects in India typically propose a percentage of construction cost, a rate per square foot or a fixed fee. A percentage scales with project cost. A per-square-foot rate is simple to compare. A fixed fee offers certainty if the scope is well defined.

The scope matters more than the number

Create a simple comparison table with one column per architect. List concept design, working drawings, structural and services coordination, approvals support, site visits, interiors, landscape and visualisations. Mark each as included, excluded or extra. Differences appear immediately.

Look at the payment schedule

Staged payments tied to deliverables are healthy. A large payment before any design is presented is a reason to ask questions.

Count the revisions and site visits

Design is iterative. Check how many rounds of revision are included and how often the architect will visit the site. These two items are the most common source of disputes and hidden costs.

Think about the cost of getting it wrong

Incomplete drawings and weak supervision tend to show up as rework and delays during construction. A slightly higher fee for a fuller scope often protects the budget.

Bengaluru-based studios such as AKAR Architects explain their stage-by-stage process openly, which helps clients understand what each phase involves. Their detailed guide to architect fees in India is available on the AKAR Architects blog.

> **Backlink placement:** link "detailed guide to architect fees in India" to the website article.

Companion to: 10 Expensive Mistakes to Avoid Before Building Your Dream Home

Before You Break Ground: The Planning Decisions That Decide Your Budget

Ask anyone who has built a home what they would do differently and the answers sound similar: "I wish I had planned that earlier."

Decide with the plot, not after it

The shape, orientation and legal status of your plot define what is possible. Reviewing a plot with an architect before purchase is one of the cheapest forms of insurance.

Write down how you live

A short brief, covering who lives in the house, who works from home, how often guests visit and how needs may change, is more useful than any magazine reference. It converts taste into requirements.

Budget beyond bricks

Design fees, approvals, landscape, fixtures, furniture and a contingency belong in the plan from the beginning. Many homeowners find that the "extras" are where budgets drift.

Finish drawings before you start building

Complete drawings let contractors price accurately and reduce on-site decisions. Starting early often costs more than waiting a few weeks.

Respect the invisible parts

Waterproofing, drainage and structural quality matter far more over time than finishes. Protect these lines in the budget first.

Plan light and air

In a moderate climate, orientation and ventilation can make a home comfortable with less energy. Decisions made at design stage cost little. Changes after construction cost a lot.

AKAR Architects, a Bengaluru design studio working across architecture, interiors and landscape, begins every project with a structured discovery conversation to surface these questions early. Their full list of ten mistakes to avoid is available on the AKAR Architects blog.

> **Backlink placement:** link "full list of ten mistakes to avoid" to the website article.

Companion to: Residential Architects in Bengaluru: What a Complete Home Design Process Looks Like

From Plot to Handover: The Five Stages of Designing a Home

Designing a home is a long collaboration. Knowing the stages in advance makes it easier to participate in the right way.

Discovery

The architect learns how your family lives, studies the plot and agrees a budget range. Skipping this stage is the most common reason homes feel generic.

Concept and curation

Layout, light, ventilation, circulation and materials come together. Expect plans, elevations and visualisations, and expect to give feedback more than once.

Detailing and coordination

Working drawings translate the concept into instructions a builder can follow. Structural, electrical and plumbing drawings are coordinated with the architecture to avoid clashes on site. Many clients never see this stage, yet it influences quality the most.

Execution

The best results come when the architect remains involved during construction, answering queries, approving materials and checking quality.

Handover

At completion, interiors, landscape and architecture should read as one idea. Plan for that from the start rather than at the end.

A tip when comparing architects

Ask each studio to describe these stages in their own words, and ask who will be responsible for each one. Clarity here is a strong sign of a well-run practice.

AKAR Architects, a Bengaluru-based design studio working across architecture, interiors, landscape and urban design, structures its projects around four steps: collaborative discovery, creative design and curation, execution and the reveal. A fuller walkthrough of residential design in Bengaluru is on the AKAR Architects blog.

> **Backlink placement:** link "fuller walkthrough of residential design in Bengaluru" to the website article.

Companion to: Architect vs Contractor vs Interior Designer: Who Do You Need First?

Who Should You Call First When You Decide to Build?

The moment you decide to build or remodel, advice arrives from every direction: relatives recommend a contractor, a friend recommends an interior designer, an online search recommends an architect. Here is a way to sort out the order.

Think in phases

Every project has three phases: design, pricing and building. Different professionals lead each phase.

Design: architect first

The architect translates your brief and your plot into a design, coordinates with structural and services consultants, and protects your interests. Starting here lets you test the plot and the budget before spending on construction.

Interiors: bring them in early

Electrical points, plumbing, door positions and storage depend on how rooms will be used. If the interior designer arrives after services are fixed, changes mean breaking finished work.

Pricing and building: contractor next

Contractors build and price what is drawn. Complete drawings give you comparable quotes and fewer surprises.

What about design-build?

A design-build contractor offers convenience and a single contact. The trade-off is the loss of an independent design check. Ask for drawings and specifications either way.

When a contractor alone is enough

Minor repairs, repainting and like-for-like replacements rarely need design input. Layout changes, structural changes and anything affecting light or ventilation do.

Studios like AKAR Architects in Bengaluru, which work across architecture, interiors and landscape, can combine several of these roles. Their complete guide to architect, contractor and interior designer roles is on the AKAR Architects blog.

> **Backlink placement:** link "complete guide to architect, contractor and interior designer roles" to the website article.

External version for Blog 6

Companion to: What to Check Before Buying a Plot to Build Your House in Bengaluru

Site Selection for a Custom Home: A Designer's Pre-Purchase Checklist

For many people, the plot is the biggest purchase of their lives. Yet the design implications of a site are often considered only after the purchase. Here is how to look at a plot through a designer's eyes before you commit.

Start with the paperwork

Ownership, approvals and land-use status come first. Have a legal professional verify title and records. Rules vary by region, so use local expertise.

Read the site's physical clues

Walk the plot at different times of day. Notice where the sun enters, where the wind comes from, where water collects after rain and how the plot sits relative to the road. These clues affect structure, comfort and cost.

Understand access and utilities

A narrow approach road can limit material delivery and increase construction cost. Check water, sewerage and electricity availability, and what each connection will involve.

Test the plot against your wish list

How much can you build, how high, with what setbacks? A quick feasibility check by an architect shows whether your brief fits the plot. It is often more useful than hours of looking at listings.

Consider the neighbourhood over time

Visit in the morning and the evening. Look at what is being built nearby, and consider noise, privacy and long-term character.

Don't forget "buildability cost"

A cheaper plot may need drainage work, retaining walls or deeper foundations. Compare plots on the total cost of making them ready, not just on the price.

AKAR Architects in Bengaluru works with clients at this early stage, as part of a collaborative discovery process. Their 10-point plot checklist for Bengaluru is on the AKAR Architects blog.

Companion to: House Construction Budget in Bengaluru: What Drives the Cost and How to Plan It

Why Per-Square-Foot Pricing Rarely Tells You the True Cost of Your Home

Ask five people what it costs to build a house and you will hear five different per-square-foot numbers. Each may be correct for their own project. None may apply to yours.

What actually moves the number

Specification is the biggest swing factor: flooring, windows, kitchens, sanitaryware and lighting range widely in price. Site conditions come next. A sloping plot or poor soil raises structural cost. Design complexity adds more, through long spans, double heights and custom details.

The costs people forget

Design and consultant fees, approvals, utility connections, compound wall, driveway, landscape, interiors and moving costs often sit outside the "construction rate". Together they can change the final figure significantly.

Build the budget from the bottom

Start with a ceiling you are comfortable with. Split it across structure, finishes, services, landscape, interiors and contingency. Ask an architect to test whether your wish list fits. Then get itemised quotes against complete drawings.

Protect a contingency

Many planners keep ten to fifteen percent in reserve. It is not a luxury; it is how projects absorb surprises without compromising quality.

Save in the right places

Simpler forms, compact plans and early decisions cost less than late changes. Save on what is easy to change later, not on structure, waterproofing or services.

Bengaluru studio AKAR Architects discusses budget at the first conversation, as part of its collaborative discovery stage. Their full guide to planning a house construction budget in Bengaluru is on the AKAR Architects blog.

> **Backlink placement:** link "full guide to planning a house construction budget in Bengaluru" to the website article.

Companion to: Luxury Villa Design: What Makes a Villa Feel Truly Luxurious (It Isn't Just Marble)

Nine Design Principles Behind Homes That Feel Luxurious

Luxury in residential design has less to do with price and more to do with how a home is experienced. These nine principles recur in the villas and large homes that feel effortlessly refined.

Space and light

Proportion and volume matter more than raw size. A well-scaled double-height space or a generous entrance sequence can define a house. Daylight, planned around orientation, brings warmth and reduces energy use.

Privacy and connection

Layered thresholds, screens and landscape allow a home to remain open to its garden while shielded from neighbours.

Materials and craft

A restrained palette, with consistent materials and careful junction details, tends to age better than a mix of competing finishes. Detailing at edges, skirtings and joinery separates a crafted home from an expensive one.

Lighting and services

Layered lighting, with ambient, task and accent sources, shapes mood. Hidden services keep ceilings and walls clean.

Everyday ease

Storage, staff and service routes, and separate zones for guests and family make a home work without effort.

The brief matters

Describe how you live and what you like about your references. Be open about budget and maintenance expectations.

Design studios that integrate architecture, interiors and landscape, such as AKAR Architects in Bengaluru, can help keep these principles consistent across a project. Their full guide to luxury villa design is available on the AKAR Architects blog.

> **Backlink placement:** link "full guide to luxury villa design" to the website article.

Companion to: Vastu and Modern Architecture: How to Balance Both in Your Home Design

Designing With Vastu Without Giving Up Modern Living

Families often ask architects the same question: can we have an open, modern home that also respects Vastu? The honest answer is usually yes, provided the conversation begins early.

Be clear about your level of adherence

Some families follow Vastu strictly, some in part, some only to avoid specific placements. Telling your architect upfront prevents rework.

Look for natural overlap

Orientation, daylight, cross-ventilation and a welcoming entrance are good design principles and also common Vastu concerns. Starting there often resolves many questions without compromise.

Know where conflicts arise

Small plots, south-facing sites and open-plan living can make certain placements hard. In those cases, rank your preferences and ask for alternative layouts.

Use the architect as a coordinator

If you are working with a Vastu consultant, share their recommendations at the layout stage. Conflicting advice delivered late is the most common source of delay and cost.

Keep daily life at the centre

A layout that follows every guideline but makes daily routes awkward is unlikely to feel right. The best plan is the one you will enjoy living in.

AKAR Architects, a Bengaluru-based studio, invites clients to share these preferences in the discovery conversation at the start of the project. Their full guide to balancing Vastu and modern design is on the AKAR Architects blog.

> **Backlink placement:** link "full guide to balancing Vastu and modern design" to the website article.

Companion to: Office Interior Design in Bengaluru: How to Plan a Workspace That Actually Works

Seven Questions to Answer Before You Design Your Office

An office interior is a business decision as much as a design one. Before choosing finishes or furniture, answer these seven questions.

1. How does your team actually work?

Map focus work, collaboration, client meetings and hybrid patterns. The mix decides your layout.

2. How will you grow?

Plan for the next two to three years. Modular layouts and provision for extra desks and services reduce the cost of expansion.

3. Which spaces matter most?

Reception, meeting rooms and pantry shape how clients and staff experience your business. Invest there first.

4. How will you manage noise?

Zone loud and quiet areas, and use soft finishes and partitions. Retrofitting acoustics is expensive.

5. What does your building require?

Check fire and life-safety, electrical capacity and landlord fit-out rules before finalising the design.

6. What is the realistic timeline?

Design, approvals, procurement and execution each take time. Decide key finishes and furniture early to avoid delay.

7. Does the plan fit the floor?

A simple test-fit of your headcount and room needs against the floor plan, before you sign a lease, can avoid expensive surprises.

AKAR Architects, a Bengaluru-based design studio working on corporate workspaces among other segments, takes clients through a structured process from discovery to completion. Their detailed guide to office interior design in Bengaluru is on the AKAR Architects blog.

> **Backlink placement:** link "detailed guide to office interior design in Bengaluru" to the website article.

Companion to: Home Renovation Planning: The Right Order of Work, Budget and Timeline

Why Renovation Projects Go Over Budget, and How to Prevent It

Renovation budgets slip for predictable reasons. Most of them can be addressed before the first hammer falls.

Scope creep

Starting with a small refresh and ending with a full remodel is common. Decide the level of change at the start: cosmetic, functional, layout or structural.

Hidden conditions

Old plumbing, wiring, damp and uneven floors tend to appear once surfaces are opened. A survey before design, and a contingency of fifteen to twenty percent, are sensible protections.

Design after demolition

Decisions made after walls are open are slower and more expensive. Finalise layout, services, lighting and key finishes on drawings first.

Work in the wrong order

Painting before joinery or flooring before overhead work leads to rework. A sequence that moves from structure to services to finishes keeps work clean and efficient.

Missing coordination

Multiple trades need a single point of coordination. Without it, delays compound.

Living in the project

Staying in the house during works saves rent but needs phasing, protection and clear rules.

AKAR Architects, a Bengaluru design studio working across architecture and interiors, helps clients define scope and priorities during its discovery stage. Their step-by-step renovation planning guide is on the AKAR Architects blog.

> **Backlink placement:** link "step-by-step renovation planning guide" to the website article.

External version for Blog 12

Companion to: Landscape Design for Homes and Villas: Planning a Garden That Lasts

Plan Your Garden Like a Floor Plan: A Room-by-Room Approach to Outdoor Spaces

A garden planned as an afterthought tends to look like one. A garden planned like a floor plan, room by room, tends to feel like part of the home.

Give each outdoor space a purpose

Decide on arrival, sit-out, activity, quiet and utility zones. Link them to interior rooms so that inside and outside connect.

Read the site first

Sun path, wind, slope and drainage shape every planting and paving choice. Water should flow away from the building.

Choose plants for the future

Think about mature size, root behaviour, water needs and local climate. Layer trees, shrubs and ground cover, and combine seasonal colour with evergreen structure.

Build the skeleton

Paths, steps, seating, edges and retaining elements are the garden's permanent structure. Choose materials that suit the building and weather well.

Add light

Soft, warm lighting extends the garden into the evening and improves safety.

Be honest about upkeep

Time and money for maintenance should shape the design. Simpler planting and efficient irrigation protect the garden over the years.

AKAR Architects, a Bengaluru design studio that includes landscape design among its disciplines, advises clients to bring landscape into the project from the discovery stage. Their guide to landscape design for homes and villas is on the AKAR Architects blog.

> **Backlink placement:** link "guide to landscape design for homes and villas" to the website article.

6. Four Lead-Generation Ads

Four ads with different angles (mistake-based Reel, educational carousel, cost and location Lead Form ad, process and testimonial Reel), each designed to start a qualified conversation, not to collect likes.

How the four ads work together

Ad	Format	Angle	Funnel	Goes live	Destination	Linked blog
1	Reel, 30 sec	Mistake-based	TOFU	Tue 6 Oct	WhatsApp	Blog 3 (10 mistakes)
2	Carousel, 9 slides	Educational checklist	MOFU	Mon 12 Oct	WhatsApp (pre-filled)	Blog 6 (plot checklist)
3	Lead Form ad, 15 sec video or static	Cost, budget and location	BOFU	Tue 6 Oct	Meta Lead Form	Blogs 1, 2, 7
4	Reel, 28 sec	Process + client testimonial	BOFU (retargeting)	Mon 19 Oct	Website enquiry page + call	Blogs 4, 8, 12

Ads 1 and 3 launch together so that you are reaching both people who are still learning and people who are actively looking for an architect. Ad 2 adds a mid-funnel education step. Ad 4 starts once audiences have built up and warms people who have already seen AKAR.

Content connection: blog to ad to enquiry

Blog (discovery and education)	Ad (attention and trust)	Action (enquiry)
Blog 3: 10 mistakes before building	Ad 1: 3 expensive mistakes	"Talk to AKAR Architects before you start" on WhatsApp
Blog 6: plot checklist	Ad 2: 7 checks before buying a plot	"Send us your plot location" on WhatsApp
Blogs 1, 2, 7: choose an architect, fees, budget	Ad 3: build in Bengaluru, know your budget fit	Feasibility discussion via Lead Form
Blogs 4, 8, 12: process, villa design, landscape	Ad 4: from first meeting to the reveal	Enquiry page or call

Every blog should carry a small banner linking to the matching ad destination, and every ad destination should link back to the relevant blog, so that readers and viewers can move in both directions.

Retargeting flow

1. **Cold audience (Ads 1 and 3).** Interest and intent targeting in Bengaluru.
2. **Warm audience 1:** Video viewers (50% or more of Ad 1 and Ad 4), Instagram engagers (last 90 days), carousel viewers (Ad 2). They see Ad 2 and then Ad 4.
3. **Warm audience 2:** Website and blog visitors (last 30 days), especially visitors of Blogs 1, 2, 4, 6 and 7. They see Ad 3 and Ad 4.
4. **Hot audience:** People who opened but did not submit the Lead Form, and people who started a WhatsApp chat but did not continue. They see Ad 4 with a direct "Book a project discussion" CTA.
5. **Exclusions:** Exclude people who already submitted a form or messaged, and existing clients, from prospecting and retargeting.

Tracking and lead quality (set up once)

- Add UTM parameters to every ad link (for example utm_source=meta, utm_campaign=oct_leads, utm_content=ad1_reel).
- Use a different pre-filled WhatsApp message per ad, so you can see which ad produced each chat.

- Install the Meta Pixel and set a Lead event on the enquiry form and the WhatsApp button.
- Review leads weekly. Mark each as qualified or not qualified, and feed that back into audience and form changes.
- Suggested budget split (a suggestion only; adjust to the client's actual budget): Ad 3 about 40%, Ad 1 about 25%, Ad 2 about 20%, Ad 4 about 15%.

Ad 1: Reel: "3 Expensive Mistakes Before You Build"

OVERVIEW

Field	Detail
Ad objective	Generate WhatsApp enquiries from people planning to build a home, by showing that the costliest mistakes happen before construction begins.
Target audience	People in Bengaluru planning to build a house or villa, or about to buy a plot.
Ad type and angle	Mistake-based, problem/solution educational Reel.
Format	Vertical 9:16 Reel (Instagram Reels, Facebook Reels, Stories placements).
Duration	30 seconds.
Funnel stage	TOFU (awareness) with a direct enquiry CTA.
Suggested run window	Tue 6 Oct to Sat 31 Oct 2026.
Linked blog	Blog 3: 10 Expensive Mistakes to Avoid Before Building Your Dream Home.

HOOK, PROBLEM, REVEAL, PAYOFF AND CTA

Element	Summary
Hook (0-3 sec)	"The most expensive mistakes in your new home happen before construction even starts."
Problem (3-8 sec)	Many families buy the plot first, hire a contractor next and call an architect only when things start going wrong.
Reveal (8-18 sec)	The three mistakes: (1) buying a plot before checking what you are allowed to build on it, (2) starting construction before drawings are complete, so decisions are made on site, (3) budgeting only for construction and forgetting approvals, landscape, fixtures and contingency.
Payoff (18-25 sec)	The right order protects your budget: brief, design, complete drawings, then build.
CTA (25-30 sec)	"Planning a home in Bengaluru? Talk to AKAR Architects before you start." WhatsApp us.

COMPLETE VIDEO SCRIPT

Time	Visual	Voiceover	On-Screen Text
0-3 sec (HOOK)	Close-up of a pen circling an empty plot on a hand-drawn site sketch. A single construction helmet drops into frame.	"The most expensive mistakes in your new home happen before construction even starts."	"Building a home? Avoid these 3 costly mistakes."
3-8 sec (PROBLEM)	Quick cuts: a plot board, rolled drawings with red cross-marks, a calculator. Family looking at an empty plot.	"Most families buy the plot first, hire a contractor next, and call an architect when things go wrong."	"Plot first. Contractor next. Architect last?"
8-11 sec (REVEAL 1)	Card 1 slides in over a plan sketch with setback lines.	"One: buying a plot before checking what you're actually allowed to build on it."	"1. Plot bought without checking what you can build"
11-14 sec (REVEAL 2)	Card 2 over a drawing set, with half the sheets blank.	"Two: starting construction before the drawings are complete, so decisions get made on site."	"2. Construction started before drawings are complete"
14-18 sec (REVEAL 3)	Card 3 over a list that grows: construction, then approvals, landscape, fixtures, contingency.	"Three: budgeting for construction only, and forgetting approvals, landscape, fixtures and contingency."	"3. Budget that only covers construction"
18-25 sec (PAYOFF)	Clean four-step diagram animates with ticks: Brief, Design, Drawings, Build. Warm palette.	"Get the order right and you protect your budget. Brief first. Then design. Then complete drawings. Then build."	"Brief. Design. Drawings. Then build."
25-30 sec (CTA)	AKAR logo on a warm neutral background, with a WhatsApp icon and a short line.	"Planning a home in Bengaluru? Talk to AKAR Architects before you start."	"Talk to AKAR Architects before you start. WhatsApp us."

VOICEOVER (CONTINUOUS)

The most expensive mistakes in your new home happen before construction even starts. Most families buy the plot first, hire a contractor next, and call an architect when things go wrong. One: buying a plot before checking what you're actually allowed to build on it. Two: starting construction before the drawings are complete, so decisions get made on site. Three: budgeting for construction only, and forgetting approvals, landscape, fixtures and contingency. Get the order right and you protect your budget. Brief first. Then design. Then complete drawings. Then build. Planning a home in Bengaluru? Talk to AKAR Architects before you start.

Tone: calm, confident, conversational. Avoid a "salesy" voice. An optional Kannada or Hindi voiceover version can be made for wider reach.

ON-SCREEN TEXT

- "Building a home? Avoid these 3 costly mistakes."
- "Plot first. Contractor next. Architect last?"
- "1. Plot bought without checking what you can build"
- "2. Construction started before drawings are complete"
- "3. Budget that only covers construction"
- "Brief. Design. Drawings. Then build."
- "Talk to AKAR Architects before you start. WhatsApp us."

VISUAL DIRECTION

- **Opening visual:** Hand-drawn plot sketch on tracing paper with a pen circling the plot. Natural light, shallow depth of field.
- **Camera shots:** Overhead desk shot, close-up of pen, slow push-in on drawings, and a medium shot of a couple looking at a plot (stock or shot by AKAR; avoid faces of clients without permission).
- **Project images to use:** None are required. Use plan sketches, renders and approved AKAR images only if supplied by AKAR.
- **Animation:** Number cards slide in from the right; the budget list builds line by line; the four-step diagram animates left to right with ticks.
- **Text placement:** Keep text in the central safe zone (clear of the top 14% and bottom 20% of the frame, where the Reel interface sits). Large serif headlines, sans-serif subtext.
- **Transitions:** Quick match-cuts on hand movement; simple slides for cards; no flashy effects.
- **B-roll:** Rolled drawings, scale ruler, material samples, plot board, stairs under construction (stock acceptable).
- **Branding:** Neutral warm palette with bronze accent. Small AKAR logo at the top left from second 3, and a larger logo on the CTA screen.
- **CTA screen:** Logo, one-line CTA, WhatsApp icon and the studio's location line (KR Circle, Bengaluru).

AD COPY

Primary ad copy: Building a home in Bengaluru? The costliest mistakes happen before construction begins. Buying a plot without checking what you can build, starting before drawings are complete, and budgeting only for construction. Watch the 30-second guide, then message us before you start. We will tell you honestly what to check first.

Headline: 3 Mistakes That Cost Homeowners the Most

Description: Talk to AKAR Architects before you start building.

CTA button: Send WhatsApp Message (alternative: Contact Us)

Thumbnail text: 3 COSTLY HOME-BUILDING MISTAKES

CAPTION

The most expensive mistakes in a new home are made before the first brick is laid. Three to avoid: 1) buying a plot before checking what you can build, 2) starting construction before drawings are complete, 3) budgeting only for construction. Planning a home in Bengaluru? Message us on WhatsApp before you start. Full guide in the link in bio.

KEYWORDS

HASHTAGS

#HomeConstruction #BuildingAHome #ArchitectsInBengaluru #BengaluruHomes #DreamHome #HomePlanning #AkarDesignStudio #ResidentialArchitecture

LEAD OFFER

Initial project discussion (a short call or meeting to review your plot, plans and concerns). It attracts serious home builders, not people looking for a free download. To confirm with AKAR before launch: duration, whether it is free, and who conducts it.

LEAD FORM

Not used for this ad. Reason: WhatsApp gives the quickest route from a short Reel to a conversation. Qualification happens inside the chat (see below).

RECOMMENDED DESTINATION

WhatsApp (click-to-message) with a pre-filled message: "Hi AKAR, I'm planning to build a home in Bengaluru and would like an initial project discussion. Plot location: ___ Plot size: ___ Planned start: ___." Why: this viewer is early in the journey and responds well to a low-pressure, one-tap conversation. Set up an auto-reply that asks for plot status, size and timeline.

TARGETING

Field	Recommendation
Location	Bengaluru and a 25 km radius. Do not target other cities until AKAR confirms it takes projects there.
Age range	28 to 55
Interests	Home construction, architecture, interior design, real estate, home loans, property portals (check availability in Ads Manager)
Behaviour and intent	People engaging with property, home improvement and home-loan content. Exclude people under 25 and anyone who has already enquired.
Audience type	Cold prospecting; keep Advantage+ audience expansion off for the first week to protect quality
Retargeting	Video viewers (50% or more) and Instagram engagers move to Ad 2 and Ad 4.

Ad 2: Carousel: "7 Checks Before You Buy a Plot in Bengaluru"

OVERVIEW

Field	Detail
Ad objective	Capture serious plot buyers with a saveable checklist, then move them to a WhatsApp plot-feasibility conversation.
Target audience	People who own a plot or are about to buy one in Bengaluru and plan to build a home or villa.
Ad type and angle	Educational carousel, checklist and "what you did not know" reveal.
Format	Carousel, 4:5 or 1:1 slides.
Duration / slides	9 slides.
Funnel stage	MOFU (consideration).
Suggested run window	Mon 12 Oct to Sat 31 Oct 2026.
Linked blog	Blog 6: What to Check Before Buying a Plot to Build Your House in Bengaluru.

HOOK, PROBLEM, REVEAL, PAYOFF AND CTA

Element	Summary
Hook (slide 1)	"Buying a plot in Bengaluru? Check these 7 things before you pay the token amount."
Problem (slides 2-3)	A plot can look perfect on a weekend visit and still cost far more to make buildable.
Reveal (slides 4-8)	Most buyers check the price. Few check how much they are actually allowed to build. Road width, setbacks and layout approval decide that.
Payoff (slide 8)	A seven-point checklist the viewer can save and use on every site visit.
CTA (slide 9)	"Send us your plot location and size. We will tell you what the plot can hold."

SLIDE-BY-SLIDE SCRIPT

Slide	Design and text	Notes for designer
1 (HOOK)	Headline: "Buying a plot in Bengaluru? 7 checks before you pay the token amount." Subtext: "Swipe. Save this."	Photo or render of an empty plot at golden hour; large serif headline.
2 (PROBLEM)	"A plot can look perfect and still cost you lakhs to make buildable."	Split image: attractive plot on the left, uneven drainage and narrow lane on the right.
3 (CHECK 1)	"1. Title documents and khata. Have a lawyer verify them. A-khata and B-khata are treated differently."	Document icon; thin bronze line; clean layout.
4 (CHECK 2)	"2. Land use and layout approval. Is the land approved for residential use, in an approved layout?"	Simple map-style graphic.
5 (CHECK 3)	"3. Road width and access. It affects setbacks, parking and how materials reach the site."	Plan diagram with road and setback lines.
6 (CHECK 4)	"4. Orientation, sun and wind. It decides light, heat and how comfortable the home feels."	Sun-path diagram with arrows.
7 (CHECKS 5-6)	"5. Slope, drainage and soil. 6. Water, sewage and power availability."	Section drawing of a sloping plot.
8 (REVEAL)	"7. What are you allowed to build? Most buyers check the price. Few check the permissible built-up area, height and setbacks."	Strong contrast slide in dark tone, highlighted text.
9 (CTA)	"Send us your plot location and size. We will tell you what it can hold." AKAR Architects logo, WhatsApp button.	Warm background, logo, KR Circle, Bengaluru line.

VOICEOVER

No voiceover (static carousel). If you convert it to a 20-second slideshow Reel, narrate the headline of each slide in a calm, conversational tone.

ON-SCREEN TEXT

- Slide 1: "Buying a plot in Bengaluru? 7 checks before you pay the token amount."
- Slide 2: "A plot can look perfect and still cost you lakhs to make buildable."
- Slides 3 to 8: the seven checks listed above.
- Slide 9: "Send us your plot location and size. We will tell you what it can hold."

VISUAL DIRECTION

- **Opening visual:** An empty plot at golden hour, with a thin line-drawn overlay showing the plot boundary.
- **Camera shots:** Wide plot shots, overhead views, street-level view of the access road (stock acceptable).
- **Project images to use:** None required. Use diagrams. Add approved AKAR project images only on the final slide if supplied.
- **Animation:** If used as a video, slides advance with a gentle horizontal slide; the "7" in the reveal slide enlarges.
- **Text placement:** One idea per slide, left-aligned, generous margins, serif headline and sans-serif body.
- **Transitions:** Consistent bronze line that continues from slide to slide to encourage swiping.
- **B-roll / extras:** Measuring tape, survey stones, plot boundary markers.
- **Branding:** Small logo bottom-left on all slides; full logo on slide 9.
- **CTA screen:** Slide 9 with the CTA line, WhatsApp button and location.

AD COPY

Primary ad copy: A plot can look perfect on a weekend visit and still become an expensive problem. Before you pay the token amount, check the title and khata, land use, road width, orientation, slope and drainage, utilities and, most importantly, how much you are allowed to build. Swipe through our 7-point checklist and save it for your next site visit. Then send us your plot location and size, and we will tell you what it can hold.

Headline: 7 Checks Before You Buy a Plot

Description: Send us your plot details for a feasibility discussion.

CTA button: Send WhatsApp Message (alternative: Learn More to the blog)

Thumbnail text: BUYING A PLOT? CHECK THESE 7 THINGS

CAPTION

Buying a plot in Bengaluru? Before you pay the token amount, check: 1) title and khata, 2) land use and layout approval, 3) road width, 4) orientation, 5) slope, drainage and soil, 6) utilities, 7) what you are allowed to build. Save this for your next site visit. Planning to build? Message us your plot location and size.

KEYWORDS

Type	Keywords
Primary keyword	things to check before buying a plot in Bengaluru
Secondary keywords	plot buying checklist; site selection for house construction; checklist before buying a plot
Long-tail keywords	what to check before buying a plot in Bengaluru to build a house; A khata vs B khata plot for construction
Location keywords	Bengaluru; Bangalore; South Bengaluru; North Bengaluru (use only areas AKAR confirms)
Instagram search keywords	plot buying tips; buying a plot Bangalore; home construction checklist; architects in Bengaluru

HASHTAGS

#PlotBuying #BuyingAPlot #BengaluruRealEstate #HomeConstruction #ArchitectsInBengaluru #HomePlanning #AkarDesignStudio #ResidentialArchitecture

LEAD OFFER

Plot feasibility discussion: share a plot location and size and receive a short conversation on what the site can hold, orientation and likely design considerations. This attracts people who own or are about to buy a plot, which is a qualified audience. To confirm with AKAR: whether this is free and how detailed it will be.

LEAD FORM

Not used. Reason: WhatsApp allows the viewer to send a plot photo, a location pin or a document quickly, which a form cannot. If you prefer a form, use the short form from Ad 3.

RECOMMENDED DESTINATION

WhatsApp (click-to-message) with the pre-filled message: "Hi AKAR, I have a plot / am considering a plot in ___ (area). Size: ___. I'd like to discuss what I can build." Why: plot buyers tend to have a location pin, photos and dimensions ready, and WhatsApp is the easiest way to share them. Use the auto-reply to ask for a plot status (owned or planning to buy), approximate size and timeline.

TARGETING

Field	Recommendation
Location	Bengaluru. Optionally exclude areas where AKAR does not work.
Age range	28 to 50
Interests	Real estate, property portals, home loans, home construction, architecture
Behaviour and intent	People interacting with property and home-loan content. Include engaged viewers of Ad 1 as a custom audience.
Audience type	Warm and cold mix (50% custom audience from Ad 1 viewers and Instagram engagers, 50% interest-based)
Retargeting	Carousel viewers who reached slide 6 or more, and blog visitors of Blog 6, move to Ad 3 and then Ad 4.

Ad 3: Lead Form Ad: "Planning to Build in Bengaluru? Know Your Budget Fit First"

OVERVIEW

Field	Detail
Ad objective	Collect qualified project enquiries (project type, location, size, budget and timeline) from people actively looking to hire an architect.
Target audience	People in Bengaluru planning a new home, villa or a major interior or commercial project, who are close to deciding on a design professional.
Ad type and angle	Lead Form ad, cost and budget angle with a location hook.
Format	Meta Lead Form ad with a 15-second video (preferred) or a single static image.
Duration	15 seconds (video version).
Funnel stage	BOFU (conversion).
Suggested run window	Tue 6 Oct to Sat 31 Oct 2026.
Linked blogs	Blog 1 (how to choose an architect), Blog 2 (architect fees), Blog 7 (house construction budget).

HOOK, PROBLEM, REVEAL, PAYOFF AND CTA

Element	Summary
Hook (0-3 sec)	"Planning to build in Bengaluru? Your budget decides your design. Not the other way around."
Problem (3-6 sec)	Most people plan a dream home first and discover the cost later, when changing course is expensive.
Reveal (6-11 sec)	The budget is shaped by plot conditions, design complexity, specification and the costs outside construction, such as approvals, landscape and contingency. A per-square-foot number hides most of it.
Payoff (11-13 sec)	An honest conversation before design starts shows what fits your budget and where to make trade-offs.
CTA (13-15 sec)	"Share your plot and budget range. Book a project discussion with AKAR Architects."

COMPLETE VIDEO SCRIPT

Time	Visual	Voiceover	On-Screen Text
0-3 sec (HOOK)	Warm render or approved AKAR home image fading into a simple budget sheet.	"Planning to build in Bengaluru? Your budget should shape your design, not surprise it."	"Planning to build in Bengaluru?"
3-6 sec (PROBLEM)	Calculator and a stack of quotes. A single "Rs ___ per sq ft" figure with a question mark.	"One per-square-foot number never tells the whole story."	"One number never tells the whole story."
6-11 sec (REVEAL)	Animated icons build up: plot conditions, design complexity, finishes, services, approvals, landscape, contingency.	"Plot conditions, design, finishes, services, approvals, landscape and contingency all shape the real cost."	"Plot. Design. Finishes. Approvals. Landscape. Contingency."
11-13 sec (PAYOFF)	A plan sketch beside a tick-marked budget line.	"An honest conversation before design starts shows what fits, and what to trade off."	"Know your budget fit before you start."
13-15 sec (CTA)	AKAR logo, button graphic, location line.	"Share your plot and budget range. Book a project discussion with AKAR Architects."	"Book a project discussion. Bengaluru."

VOICEOVER (CONTINUOUS)

Planning to build in Bengaluru? Your budget should shape your design, not surprise it. One per-square-foot number never tells the whole story. Plot conditions, design, finishes, services, approvals, landscape and contingency all shape the real cost. An honest conversation before design starts shows what fits, and what to trade off. Share your plot and budget range. Book a project discussion with AKAR Architects.

- "Know your budget fit before you start."
- "Book a project discussion. Bengaluru."
- Static version headline: "Planning to build in Bengaluru? Know your budget fit first."

VISUAL DIRECTION

- **Opening visual:** A refined render or an approved AKAR home image (if supplied), softly transitioning to a clean budget sheet.
- **Camera shots:** Slow push-in on the render, overhead shot of a desk with drawings and a calculator, close-up on a plan.
- **Project images to use:** One or two approved AKAR residential images only (no stock images of other architects' work). If none are available, use clean line-drawn illustrations.
- **Animation:** Icons appear one by one with a soft fade; the budget line fills as ticks appear.
- **Text placement:** Centre-safe, high contrast, maximum six words per screen.
- **Transitions:** Soft crossfades; avoid fast cuts to keep a premium feel.
- **B-roll:** Drawing sets, material samples, tape measure, pen on plan.
- **Branding:** Logo top left throughout; neutral palette with bronze accents.
- **CTA screen:** Logo, "Book a project discussion", and the location line.

AD COPY

Primary ad copy: Planning a home, villa or major interior project in Bengaluru? Your budget should shape your design, not surprise it. In a short project discussion, AKAR Architects will look at your plot, your brief and your budget range, and tell you honestly what is achievable and where to make trade-offs. Share a few details in the form below, and we will get back to you to set up the conversation.

Headline: Know Your Budget Fit Before You Build

Description: Book a project discussion with AKAR Architects.

CTA button: Get Quote (alternatives: Book Now, Sign Up). "Get Quote" signals a serious enquiry.

Thumbnail text: BUILDING IN BENGALURU? KNOW YOUR BUDGET FIT

CAPTION

One per-square-foot number never tells the whole story. Plot conditions, design, finishes, approvals, landscape and contingency all shape the real cost of a home. If you are planning to build in Bengaluru, share your plot and budget range for a project discussion with AKAR Architects. Link in bio.

#ArchitectsInBengaluru #HomeConstructionBudget #BengaluruArchitects #HouseDesign #VillaDesign #AkarDesignStudio #DreamHome

LEAD OFFER

Project feasibility discussion: a focused conversation on your plot, brief and budget range, with an honest view of what fits. Chosen because it attracts people who already have a project, and it filters out casual browsers. To confirm with AKAR: whether it is free, the duration and who attends.

LEAD FORM

Use a **"Higher intent"** form (adds a review step before submission) so that low-quality accidental submits are reduced.

Form headline: Book Your Project Discussion

Description: Tell us about your project. An AKAR Architects team member will contact you to schedule a conversation. We use your details only to respond to your enquiry.

Questions (8 in total, kept short):

#	Question	Type	Purpose
1	Full name	Prefilled	Contact
2	Phone number (WhatsApp preferred)	Prefilled	Contact
3	What are you planning?	Dropdown: New home or villa / Home interiors / Renovation or remodel / Office or commercial space / Landscape	Service match
4	Project location (area in Bengaluru or city)	Short answer	Location filter
5	Plot or property status	Dropdown: I own the plot or property / I am buying soon / I am still exploring	Intent
6	Approximate built-up area (sq ft)	Dropdown: Under 1,500 / 1,500 to 3,000 / 3,000 to 5,000 / Above 5,000 / Not sure	Project size
7	Estimated total budget	Dropdown: Under 50 lakh / 50 lakh to 1 crore / 1 to 2 crore / Above 2 crore / Not decided (adjust ranges to AKAR's preferred project size)	Budget filter
8	When do you plan to start?	Dropdown: Within 3 months / 3 to 6 months / 6 to 12 months / Just exploring	Timeline

Thank-you screen: "Thank you. We will call you within one working day to schedule your project discussion. Meanwhile, read our guide: How to Choose an Architect in Bengaluru." Buttons: "Chat on WhatsApp" and "Visit website". (Confirm the response time AKAR can honour.)

Lead handling tip: call within an hour whenever possible, and prioritise leads with an owned plot, a start date within 6 months and a stated budget.

RECOMMENDED DESTINATION

Meta Lead Form with an instant WhatsApp follow-up. Why: this audience is ready to compare architects, and an in-app form removes friction on mobile. The qualifying questions let the AKAR team focus on serious projects first.

TARGETING

Field	Recommendation
Location	Bengaluru and nearby areas AKAR serves (confirm).
Age range	30 to 60
Interests	Architecture, interior design, luxury homes, real estate, home improvement, home loans

Field	Recommendation
Behaviour and intent	People engaging with property and home-improvement content; business owners and professionals (for villa and office projects). Use lookalikes (1%) of any existing client list if AKAR can supply one.
Audience type	Cold, intent-focused; 20 to 30% of spend to warm audiences
Retargeting	Anyone who opened but did not submit the form sees Ad 4 and a reminder version with the headline "Still planning? Book your project discussion."

Ad 4: Reel: "From First Meeting to the Reveal" (Process + Testimonial)

OVERVIEW

Field	Detail
Ad objective	Convert warm audiences who already know AKAR by showing the four-step process and a real client testimonial, and driving them to the enquiry page or a call.
Target audience	Website and blog visitors, Instagram engagers, video viewers and people who opened but did not submit the Lead Form. Home builders, villa owners and business owners looking for an architect.
Ad type and angle	Testimonial and process ad (trust and social proof), with an element of "problem/solution" in the opening.
Format	Vertical 9:16 Reel.
Duration	28 seconds.
Funnel stage	BOFU (retargeting and conversion).
Suggested run window	Mon 19 Oct to Sat 31 Oct 2026 (extend if results are good).
Linked blogs	Blog 4 (residential design process), Blog 8 (luxury villa design), Blog 12 (landscape design).

HOOK, PROBLEM, REVEAL, PAYOFF AND CTA

Element	Summary
Hook (0-3 sec)	"What if building your home felt organised, not stressful?"
Problem (3-7 sec)	Most people fear delays, overruns and poor communication when building a home.
Reveal (7-19 sec)	AKAR's four-step process: collaborative discovery, creative design and curation, execution (on time, on budget) and the reveal. One real client testimonial appears as proof (use the exact approved wording).
Payoff (19-24 sec)	A clear process, with you involved at every stage, is what turns a stressful project into a smooth one.
CTA (24-28 sec)	"Book a project discussion with AKAR Architects." Call or enquire now.

COMPLETE VIDEO SCRIPT

Time	Visual	Voiceover	On-Screen Text
0-3 sec (HOOK)	Slow reveal of a finished interior or exterior (approved AKAR image) with warm light.	"What if building your home felt organised, not stressful?"	"Building a home, without the stress?"
3-7 sec (PROBLEM)	Fast, muted cuts of clutter, tangled plans, a phone with unanswered messages.	"Delays. Overruns. Messages that go unanswered. Most people fear these before they start."	"Delays. Overruns. Silence."
7-10 sec (STEP 1)	Sketch-book discovery meeting with a couple and an architect (permissioned or staged).	"Step one: collaborative discovery. We listen first."	"1. Collaborative discovery"
10-13 sec (STEP 2)	Mood board, plan, 3D render coming together.	"Step two: creative design and curation."	"2. Creative design and curation"
13-16 sec (STEP 3)	Site visit, hard hat, drawings in hand.	"Step three: execution. On time. On budget."	"3. Execution: on time, on budget"
16-19 sec (STEP 4)	Finished space, soft light, a family entering.	"Step four: the reveal."	"4. The reveal"
19-24 sec (TESTIMONIAL AND PAYOFF)	Client testimonial card over a project image. Voiceover continues.	"A clear process means you always know what happens next."	"[Approved client testimonial text, with name and city]"
24-28 sec (CTA)	AKAR logo, call and enquiry icons.	"Book a project discussion with AKAR Architects."	"Book a project discussion. Call or enquire now."

VOICEOVER (CONTINUOUS)

What if building your home felt organised, not stressful? Delays. Overruns. Messages that go unanswered. Most people fear these before they start. Step one: collaborative discovery. We listen first. Step two: creative design and curation. Step three: execution. On time. On budget. Step four: the reveal. A clear process means you always know what happens next. Book a project discussion with AKAR Architects.

ON-SCREEN TEXT

- "Building a home, without the stress?"
- "Delays. Overruns. Silence."
- "1. Collaborative discovery"
- "2. Creative design and curation"
- "3. Execution: on time, on budget"
- "4. The reveal"
- "[Approved client testimonial text, with name and city]" (use exactly what AKAR has published; do not edit the wording)
- "Book a project discussion. Call or enquire now."

VISUAL DIRECTION

- **Opening visual:** A finished AKAR space in warm natural light (only with AKAR's approval).
- **Camera shots:** Slow push-ins on interiors, hand-held sketch-book shots, site walk-through, close-up of material samples.
- **Project images to use:** Approved AKAR project images only. Credit photographers in the caption if applicable. If no approved images exist, build the reel from sketches, plans and renders.
- **Animation:** Four process steps appear as stacked numbered chips that fill in as each step plays.
- **Text placement:** Central safe zone; testimonial card with a thin bronze outline and a quotation mark graphic.
- **Transitions:** Smooth crossfades between steps; match-cut between sketch and finished space.
- **B-roll:** Material samples, plan tables, site visits, finished details.
- **Branding:** Logo top left; consistent type; bronze accent; no heavy effects.
- **CTA screen:** Logo, "Book a project discussion", call icon, and the website enquiry link.
- **Compliance:** Display a testimonial only with the client's permission and the exact published wording.

AD COPY

Primary ad copy: Building a home should not mean weeks of worry about delays, overruns and silence. At AKAR Architects, every project follows a clear four-step process: collaborative discovery, creative design and curation, execution, and the reveal. You are involved at each stage, and you always know what happens next. Hear what our clients say, then book a project discussion.

Headline: A Clear Process for Building Your Home

Description: Book a project discussion with AKAR Architects.

CTA button: Book Now (alternative: Contact Us or Call Now)

Thumbnail text: FROM FIRST MEETING TO THE REVEAL

CAPTION

Four steps. One clear journey. Collaborative discovery, creative design and curation, execution and the reveal. That is how we work at AKAR Architects. Planning a home, villa or workspace? Book a project discussion. Link in bio.

KEYWORDS

Type	Keywords
Primary keyword	residential architects in Bengaluru

HASHTAGS

#ArchitectsInBengaluru #ResidentialArchitecture #HomeDesign #AkarDesignStudio #BengaluruHomes #InteriorDesign #LandscapeDesign

LEAD OFFER

Project discussion with the AKAR team, for people who have already seen AKAR content and are ready to talk. Because the audience is warm, no gated resource is needed. To confirm with AKAR: availability for calls and meetings.

LEAD FORM

Not used for this ad. Reason: the audience already knows AKAR and benefits more from a direct call or a short website enquiry form. If a form is preferred, reuse the Ad 3 form.

RECOMMENDED DESTINATION

Website enquiry page with a click-to-call button and a WhatsApp option. Why: warm visitors want to confirm credibility, so a page showing the process, testimonials and contact options converts better than a chat alone. Add a short enquiry form with name, phone, project type, location and timeline. Make sure the page works well on mobile and fix the spelling error on the homepage portfolio heading before sending paid traffic.

TARGETING

Field	Recommendation
Location	Bengaluru (and other cities only if AKAR confirms it takes projects there; testimonials come from Chennai, Hyderabad and Kochi).
Age range	28 to 60
Interests	Not needed for core audiences. Use custom audiences.
Behaviour and intent	Website and blog visitors (30 days), Instagram engagers (90 days), Ad 1 and Ad 4 video viewers (50% or more), Ad 2 carousel viewers, Lead Form openers who did not submit.
Audience type	Retargeting (warm and hot)
Retargeting	If someone watches 75% or more but does not enquire in 7 days, show a short variant: testimonial only, with a direct call button. Exclude those who have enquired.
