Architect Reel Plan: 12 Reels for the Month

Complete scripts in Hook + Reveal + CTA + Payoff format, each 45-60 seconds, with a two-visit shoot plan.

1. Competitor and Trend Check

I searched for current architect and interior-design Reel trends. Instagram cannot be browsed directly, so I could not review specific competitor accounts. This plan uses 2026 format trends and common patterns on architect pages: reveal transitions, quick educational Reels that people save, and lo-fi, authentic content. If you share 3-5 competitor handles, the hooks can be sharpened against what they post.

Verdict on the original 6 ideas

#	Idea	Verdict	Fix
1	Things architects do	Weak as it stands; every architect page posts 'day in the life'	Reframe as 'What clients think I do vs what I actually do'
2	Work in progress at client site	Strong	Add a before/after reveal and one 'problem we caught' moment
3	Marbles in her office	Strong, very saveable	Make it '3 tests before you buy marble'
4	How a client chooses an architect	Strong	Open with a mistake clients make
5	Principal + CEO discussion	Good for trust	Give it a debate hook: design vs budget
6	What interior designers can do	Good but vague	Retitle: 'Architect vs Interior Designer: who do you hire first?'

New ideas added (7-12)

- **7** Where your money goes (budget breakdown)
- **8** Five mistakes before building your home
- **9** Sketch to site reveal
- **10** Architect fee myths
- **11** One small design change that makes a home feel bigger
- **12** Handover reveal and client reaction

2. Script Format

Every script follows Hook (0-3s), Reveal (3-30s), CTA (30-40s), Payoff (40-55s), in the order you asked for. The CTA is a short 'why you should save, follow or comment' line, and the payoff is the closing line that lands the promise made in the hook. Each script is about 110-140 spoken words. They are written in simple English and are easy to translate to Tamil, Kannada or Hindi.

3. Shoot Plan

Shoot	Reels	What to capture
Client Visit 1 (work started or running)	2 (part 1), 1 (site portions), 8, 9	Site walk-through, measuring, contractor talk, sketch held against the real space, 5 mistakes talk on site

Shoot	Reels	What to capture
Client Visit 2 (progress or finishing)	2 (part 2), 9 (final), 11, 12	Same 3 fixed angles as Visit 1, a finished room, handover reaction
Office shoot (no client, half day)	3, 4, 5, 6, 7, 10	Marble samples, talking-head pieces, the two-architect debate, whiteboard budget

- Get the client's permission before filming them. Reels 2, 9 and 12 depend on it.
- Shoot the same 3 fixed angles on both visits so the progress comparison works.
- Film vertical (9:16), and capture extra B-roll of hands, drawings and materials for every reel.

4. Scripts: Your Original 6 Ideas

Reel 1: What clients think I do vs what I actually do

Shoot: Client Visit 1 site, plus office B-roll

HOOK **0-3 sec**	"Clients think architects just draw pretty pictures. Here's what we actually do." (fast cut of her sketching)
REVEAL **3-30 sec**	Rapid cuts with text on screen, about 4 seconds each: - Measuring the site: "Every wall is checked on site. A 2-inch error can cost lakhs." - Talking to the contractor: "We explain the drawing to the mason, not just the client." - Checking materials: "We reject materials that don't match what was approved." - Reviewing a 3D model: "We plan where your light, air and furniture go." - Approvals: "Plans, approvals, structure coordination, all before you see a brick."
CTA **30-40 sec**	"If you're planning a home, save this so you know what to expect from your architect."
PAYOFF **40-55 sec**	"So the next time someone says 'architects only draw,' send them this. We build the thing you'll live in for 30 years."

Reel 2: Work in progress (part 1 now, part 2 at Visit 2)

Shoot: Client Visit 1 and Visit 2, same 3 angles each time

HOOK **0-3 sec**	"This is a bare room today. Watch what it becomes." (wall-by-wall pan)
REVEAL **3-30 sec**	Walk through the site. She points out 3 things: the electrical points marked, the false-ceiling layout, and one problem caught early (for example, a beam clashing with the planned lighting). Voiceover: "This is why we visit the site every week. We caught this before it became a cost."
CTA **30-40 sec**	"Follow along, because I'll post this same room again in a few weeks."
PAYOFF **40-55 sec**	Part 2 uses the same angles with a before/after swipe. "Same room. Same angle. Now it's real."

Reel 3: 3 marble tests before you buy

Shoot: Office, marble samples on the table

HOOK **0-3 sec**	"Buying marble? Do these 3 things before you pay."
REVEAL **3-30 sec**	1. "See the full slab, not just the small sample. The pattern and colour can vary a lot." 2. "Look at it in daylight. Showroom lights hide flaws." 3. "Drop a little water on an unpolished spot. If it soaks in quickly, the stone is porous and needs proper sealing." Show each test on camera.
CTA **30-40 sec**	"Save this before you visit a marble shop. You'll need it."
PAYOFF **40-55 sec**	"The cheapest marble isn't always cheap. Wrong stone means stains and repairs later. Ask before you buy."

Note: These are general tips. The architect should swap in her own tests if hers differ and confirm them against her practice.

Reel 4: How to choose an architect

Shoot: Office, talking to camera

HOOK **0-3 sec**	"Don't hire an architect just because of the cheapest quote."
REVEAL **3-30 sec**	Three questions to ask: 1. "Can I see completed projects, not just 3D renders?" 2. "Who will visit my site, you or a junior?" 3. "What exactly is included in your fee?" "Also ask how many revisions you get, and how they handle budget changes."
CTA **30-40 sec**	"Save this checklist and take it to every architect you meet."
PAYOFF **40-55 sec**	"A good architect answers these happily. If they avoid them, you have your answer."

Reel 5: Principal Architect vs CEO debate

Shoot: Office, two people at a table with plans (natural conversation)

HOOK **0-3 sec**	CEO to camera: "We have a debate in this office on every project: design or budget?"
REVEAL **3-30 sec**	A real 25-second exchange. Principal: "I want the double-height ceiling. It makes the whole house feel alive." CEO: "It adds cost and cooling load. Where do we save?" Principal: "We save on the false ceiling elsewhere." CEO: "Then we agree." Let them argue for real, with a little smile.
CTA **30-40 sec**	"This is what happens before your project starts. Follow to see how we decide."
PAYOFF **40-55 sec**	Both: "That's why two architects look at every project: one for the dream, one for the budget."

Reel 6: Architect vs interior designer: who first?

Shoot: Office, talking to camera

HOOK **0-3 sec**	"Architect or interior designer: who do you hire first?"
REVEAL **3-30 sec**	"The architect plans the structure, space, light and ventilation. The interior designer works on the finishes, furniture, lighting and styling. An interior designer can transform a space, but usually can't move a wall or change the structure. If you're building new, hire the architect first. If the shell exists and you want the look changed, an interior designer is a fine start."
CTA **30-40 sec**	"Not sure where you stand? Comment your project and I'll tell you who to call first."
PAYOFF **40-55 sec**	"The right order saves money. Wrong order means breaking walls you just built."

5. Scripts: New Ideas (7-12)

Reel 7: Where does your Rs. X lakh go?

Shoot: Office, simple chart or whiteboard

HOOK **0-3 sec**	"You spent Rs. 50 lakh on your home. Do you know where it went?"
REVEAL **3-30 sec**	Show a rough split on screen: structure, finishes, electrical and plumbing, furniture, fees. "Most people overspend on finishes and underspend on planning. Wiring and plumbing are hidden but expensive to fix later."
CTA **30-40 sec**	"Follow for the budget tips nobody tells you."
PAYOFF **40-55 sec**	"Spend more on what's hidden, less on what's visible. The visible part you can always upgrade."

Note: The architect should adjust the split to realistic local ratios before filming.

Reel 8: 5 mistakes before you build your home

Shoot: Client Visit 1, on site

HOOK **0-3 sec**	"Standing on a client's site. Here are 5 mistakes people make before building."
REVEAL **3-30 sec**	Five quick text cuts: 1. Hiring the contractor before the design is final 2. No plan for storage 3. Ignoring sunlight and ventilation direction 4. Choosing materials only on looks 5. No budget buffer
CTA **30-40 sec**	"Which one are you making? Comment the number."
PAYOFF **40-55 sec**	"Every one of these is cheap to fix on paper and very expensive on site."

Reel 9: Sketch to site

Shoot: Client Visit 1 (sketch) and Visit 2 (final)

HOOK **0-3 sec**	"This sketch came out of my head. This is where it's going."
REVEAL **3-30 sec**	Hold the drawing in front of the actual wall or space so it lines up. Cut to the 3D render. "This is the corner where she'll read in the evenings. We designed the window around the light at 5 PM."
CTA **30-40 sec**	"Want to see the final result? Follow, and I'll show you in a few weeks."
PAYOFF **40-55 sec**	At Visit 2, show the finished corner from the same angle. "Sketch, render, reality."

Reel 10: 3 architect fee myths

Shoot: Office, talking to camera

HOOK 0-3 sec	"Architects are expensive. Is that actually true?"
REVEAL 3-30 sec	"Myth 1: 'The fee is just for drawings.' It covers design, coordination, site visits and problem-solving. Myth 2: 'I can save by skipping the architect.' Mistakes during construction usually cost more than the fee. Myth 3: 'The architect adds to my cost.' A good architect often saves it through better planning and material choices."
CTA 30-40 sec	"Have a question about fees? Comment it and I'll answer it."
PAYOFF 40-55 sec	"A good architect isn't an expense. It's the cheapest insurance on your biggest purchase."

Reel 11: One change that makes a home feel bigger

Shoot: Client Visit 2, in a finished room

HOOK 0-3 sec	"This room is only 120 sq ft. Why does it feel big?"
REVEAL 3-30 sec	Show 3 things: a light colour on the ceiling, a full-height curtain, and furniture lifted off the floor. "Height creates space. Lifting the eye up makes a small room feel bigger."
CTA 30-40 sec	"Save this if your room feels small."
PAYOFF 40-55 sec	"You don't need to knock a wall. You need to guide the eye."

Reel 12: The handover reaction

Shoot: Client Visit 2 at handover (get consent first)

HOOK 0-3 sec	"Watch her face when she walks into her finished home."
REVEAL 3-30 sec	Capture the walk-in, the first reaction, and a quick tour of 3 favourite details. Keep the client's voice real and unscripted.
CTA 30-40 sec	"Want a home like this? DM 'HOME' to start your project."
PAYOFF 40-55 sec	Client line, if she'll say it: "It feels like it was made for us."

6. What I Need From You

- **Language:** English, Tamil, Kannada or Hindi? I can rewrite all scripts.
- **Competitor handles** (3-5), so I can check what they post and sharpen the hooks.
- **Architect's name, city and project type** (homes, villas, apartments) to personalise the scripts.
- **Client consent** for filming. Reels 2, 9 and 12 depend on it.
